Preface x

List of Figures xv

1 Preliminaries 1
   1.1 Introduction ............................................. 1
   1.2 Basic Concepts and Theorems ............................. 1
   1.3 Definitions and Results of Decomposition of Graphs ..... 6
   1.4 Definitions and Theorems of Least Common Multiples of Graphs 7
   1.5 Preliminary Results on Decomposition and The Size of a Least Common Multiple 11

2 On $B_{m,n}$ Decomposable Graphs 16
   2.1 Introduction ............................................. 16
   2.2 A Bi-star - $B_{m,n}$ .................................... 16
   2.3 Decomposition of $B_{m,n}$ .............................. 17
   2.4 Some $B_{m,n}$ Decomposable Graphs ........................ 19
   2.5 Decomposition of $C_s + (m + n)K_1$ ..................... 24
   2.6 Decomposition of the Complement of $B_{m,n}$ ................ 31

3 Least Common Multiples Of Bi-star Versus Other Graphs 43
   3.1 Introduction ............................................. 43
   3.2 Size of a Least Common Multiple of Bi-stars Versus a Graph Having Fixed Size 43
3.3 Size of a Least Common Multiple of Bi-stars Versus More Graphs Having Fixed Size ................................................. 47
3.4 Size of a Least Common Multiple of Paths Versus other Graphs Having Fixed Size ................................................. 61

4 Least Common Multiples Of Odd Cycles And Stars 67
4.1 Introduction ......................................................... 67
4.2 Survey of Least Common Multiple of an Odd Cycle and a Star .................................................................. 67
4.3 Construction of a Graph $G_{d}^{2n+1, pd}$ where
\[2n + 1 = qd \text{ and } q|p \text{ with } p > \frac{2n+1}{2}.......................... 69
4.4 Construction of a Graph $G_{r}^{2n+1, \frac{d+1}{2}(2n+1)}$ where $d = \gcd(2n+1, r)$
with $1 \leq r \leq 2n + 1 ........................................... 71
4.5 Construction of a Graph $G_{r}^{2n+1, r(2n+1)}$ where
\[2n + 1 < r < 2(2n + 1) ........................................... 76
4.6 Construction of a Graph $G_{r}^{2n+1, kqr}$ with
\[|W_{r+2}| = k\left(\frac{q+1}{2}\right), |W_{r}| = k\left(\frac{q-1}{2}\right) \text{ where } r = 2n+1+d .................. 84
4.7 Construction of a Graph $G_{r}^{2n+1, kqr}$, where
\[2n + 1 = qd \text{ and } r = 2n + 1 + bd \text{ with } b < q. .................... 87
4.8 Construction of a Graph $G_{r}^{2n+1, kqr}$, where $k$ is even, $2n + 1 = qd$, and
\[r = \left(\frac{q}{2} - 1\right)(2n+1) + bd. ................................. 97
4.9 The Size of a Least Common Multiple of Odd Cycles Versus Stars .................................................. 102

5 On The Bounds For $lcm$ Of Bi-star Versus Other Graphs 106
5.1 Bounds for Sizes of Least Common Multiples of Bi-star Versus Some Classes of Graphs .......................... 106
5.2 Bounds for Least Common Multiple of Paths Versus Bi-stars .................................................. 108
5.3 Bounds for Least Common Multiples of Cycles Versus Bi-stars .................................................. 117
5.4 Least Common Multiple of $B_{m,n}$ and $rK_{2}$ ................................................................. 123
5.5 Least Common Multiple of any Graph $G$ and $rK_{2}$ ................................................................. 126
6 On Least Common Multiples of Even Cycles Versus Bi-stars 128

6.1 Introduction ................................................. 128

6.2 Construction of a Graph $G_{d+1,d-1}^{r, \frac{r+1}{2}}$ with
$|W_{d+1}| = |W_{d-1}| = \frac{d+1}{4} r$, where $d \equiv 3(mod 4)$ ......................... 129

6.3 Construction of a Graph $G_{y, z}^{r, \frac{d+1}{2}}$, where
$M = \mathbb{N}$ and $d \equiv 3(mod 4)$ .............................. 132

6.4 Construction of a Graph $G_{d+x-t, d-x+t}^{r, \frac{d+x}{2}}$, where $d + x \equiv 0(mod 4)$ with
$1 < x \leq d$ and $t = \{0, 2, 4\}$ ................................. 134

6.5 Construction of $G_{y, z}^{r, \frac{d+x}{2}}$, where $M = \mathbb{N}$ and $d + x \equiv 0(mod 4)$ with
$1 < x \leq d$ ..................................................... 138

6.6 $B_{m,n}$ and $C_{r}$ Decomposable Graphs of Size $tr$, where $m + n + 1 = 3t$,
$1 \leq t \leq \frac{r}{3}$ and $r \equiv 0(mod 6)$ .......................... 141

6.7 $B_{m,n}$ and $C_{r}$ Decomposable Graphs of Size $\frac{d+x}{4} r$ where $m + n + 1 = d$,
$r \equiv 0(mod d)$ and $1 \leq x < d$ .............................. 143

6.8 $B_{m,n}$ and $C_{r}$ Decomposable Graphs of Size $3r \frac{d+1}{4}$ where $m + n + 1 = 3d$
and $r \equiv 0(mod d)$ ............................................. 152

6.9 On the Size of Least Common Multiples of Even Cycles Versus Bi-stars 154

Conclusion .......................................................... 164

Glossary of Terms .................................................. 166

List of Presentations ............................................... 169

Bibliography ........................................................ 170
