List of Tables

Table 2.1: Sample Data Set.
Table 4.1: Rules identified from the Sample DT.
Table 5.1: Performance of a Decision Tree - It is generated from a set of 12 inputs and 301 data instances.
Table 5.2: Parameters used in First stage and Second stage of learning. There is no decrease in Antecedent parameters, whereas the Consequent parameters decrease significantly.
Table 5.3: Different centre values of the attribute AGE with respect to their fuzzy classes low (L), medium (M), high (H) and critical (C).
Table 5.4: Different spread (width) values of the attribute AGE with respect to their fuzzy classes low (L), medium (M), high (H) and critical (C).
Table 5.5: Convergence rate of NFDTRL system with training data and test data at the initial stage, after first stage of learning and at the end of second stage learning.
Table 5.6: Convergence rate of NFDTRL system with different scaling factor $k$. The corresponding RMSE during training is also given.
Table 5.7: Convergence rate in 6-fold Cross Validation with training data that are involved in training and that with training data and testing data which are not involved in training.
Table 5.8: Convergence rate with training data after changing some of the values of the attributes one at a time randomly.
Table 5.9: Comparison of the proposed system with two other models ANFIS and NFDT based on rule generation.
Table 5.10: Comparison of NFDT and NFDTRL systems based on convergence rate using training and testing data.
Table 5.11: Performance of a Decision Tree - It is generated from a set of 8 inputs and 301 data instances.
Table 5.12: Parameters used in first stage and second stage learning. There is no decrease in antecedent parameters, whereas the consequent parameters decrease significantly.
Table 5.13: Convergence rate of NFDTRL system using training data and test data at the initial stage, after first stage learning and at the end of second stage learning are given.
Table 5.14: Comparison of the proposed system with two other systems
ANFIS and NFDT based on rule generation

Table 5.15: Comparison of NFDT and NFDTRL systems based on the convergence rate with training and testing data

Table 5.16: Performance of a Decision Tree, generated from a set of 4 input attributes and 301 instances.

Table 5.17: Parameters used in first stage and second stage of learning. There is no decrease in antecedent parameters, whereas the consequent parameters decrease significantly

Table 5.18: Convergence rate of NFDTRL system with training data and Cleveland data at the beginning, after first stage of learning and at the end of second stage of learning.

Table 5.19: Comparison of the proposed model with two other models ANFIS and NFDT based on rule generation

Table 5.20: Comparison of NFDT and NFDTRL systems based on the training and testing convergence rate

Table 5.21: Results obtained using Genetic Algorithm for optimizing the rulebase using training data and validating it with control data

Table 5.22: Convergence rates of NFDTRL and NFDT models with training data and test data at the end of learning. The rules used here are optimized using GA before learning.
List of Figures

Figure 2.1: Sample Decision Tree
Figure 2.2: Simple Model of an Artificial Neuron
Figure 2.3: A Simple Feedforward Network
Figure 2.4: 4 - Chromosome Population
Figure 2.5: Roulette Wheel
Figure 2.6: Single-Point crossover for a pair of Chromosome of length $l = 8$
Figure 2.7: Point Mutations for a Chromosome of Length $l = 8$
Figure 4.1: Block Diagram of the Input Phase of NFDTRL System
Figure 4.2: Overlapping Structure of Gaussian Functions
Figure 4.3: Architecture of the NFDTRL System. The dashed line represents first stage learning and condensed line represents the second stage learning
Figure 4.4: Block Diagram of Improved NFDTRL System
Figure 4.5: Representation of an $i^{th}$ Chromosome
Figure 5.1: Root Mean Squared Error based on three learning-rate parameters of $\eta_3$, corresponding to the iterations by keeping $\eta_1$ and $\eta_2$ fixed
Figure 5.2: Graphic representation of fuzzy classes for the attribute $AGE$ at the initial stage. Centres are marked in the figure
Figure 5.3: Graphic representation of fuzzy classes for the attribute $AGE$ at the final stage. The new centres are marked in the figure
Figure 5.4: Root Mean Squared Error for learning the system based on three different values of $k$.
Figure 5.5: Actual Value vs Target Value of 301 instances before training
Figure 5.6: Actual Value vs Target Value of 301 patients after training
Figure 5.7: A surface diagram representing $AGE$, $SMK$ and $RMSE$
Figure 5.8: Convergence rate of NFDTRL and NFDT Systems with training and testing data
Figure 5.9: Graphic representation of Fitness Value, Optimized Rules and the instances covered from the training Data by the optimized rules
