DEDICATED TO

MY PARENTS, HUSBAND & KIDS,

for their lifelong support which has been the backbone and essence of my studies and work.
ACKNOWLEDGEMENTS

The wholehearted support, immense help and guidance of my mentor and supervising Professor, Dr K P P Pillai, made the commencement, development and completion of this work possible. He taught me different ways to approach a research problem and the need to be persistent to accomplish any goal. This study benefited greatly from his extensive experience, expertise and great deal of insight in Electromagnetic Field Theory. No words can express my debt of gratitude to him. I am extremely grateful to my guide Dr Achuthsankar S Nair also, for his invaluable help and encouragement throughout the period of the work. Without their able guidance, this thesis would never have seen light in three years’ time.

The help rendered by the authorities of M/s Kerala Electrical & Allied Engineering Co Ltd (KEL), Kundara is thankfully acknowledged.

Thanks are due to Dr P S Chandramohan Nair, Professor, Department of Electrical Engineering, for the fruitful discussions in the initial stages, which raised several ideas that gave me a “kick start” in the research work. The creative support provided by Dr N Rajendran and Dr D Samchantan, former Heads of the Department of Electrical Engineering and Prof M Mathews Panicker, the present Head of the Department of Electrical Engineering is thankfully remembered. I would like express my sincere thanks to Dr Ashalatha Thampuran former Principal, College of Engineering, Trivandrum for her support, which helped me to overcome many obstacles, during the course of the research. I thankfully acknowledge the help received from Prof S K Mohan, Director of Technical Education and Prof Antony Thomas, Principal, College of Engineering, Trivandrum.

I wish to express my heartfelt thanks to all the staff members of the Department of Electrical Engineering, especially my senior colleagues, Prof A Shajilal, Prof D P Balachandran, Dr Dinesh Pai and my friends Mrs Mabel Ebenezer and Mr Francis M Fernandez for providing useful suggestions, encouragement and help, at various junctures of the research. I appreciate the efforts of the laboratory technical staff for making the working environment so pleasant and thank them for the help rendered in conducting experiments.
