Acknowledgment

There are a number of people without whom this thesis might not have been done, and to whom I am greatly indebted.

My foremost thanks and deep sense of gratitude goes to my supervising teacher Dr. K. Revathy, Professor (Rtd.), Department of Computer Science, University of Kerala for giving me a free hand in research along with continued guidance and support throughout the long course of the programme. She was more of a friend than guide during the course of my studies. I have learned so much, and without you, this would not have been possible. Thank you so much for a great experience.

I would like to thank The Head, Department of Computer Science, University of Kerala for giving me this opportunity to do my research at Research Centre, Department of Computer Science.
My immense thanks to Teachers, Librarian and non-teaching staffs of the department for their kindness, motivation and support.

My sincere thanks to Dr. S. R. Prabhakaran Nayar, Professor (Rtd.), Department of Physics, University of Kerala for his invaluable suggestions and many interesting discussions which threw light on a number of subtle points in the study.

My heart felt thanks to all friends and colleagues for having helped me in more than one way throughout the research work.

The thesis would not have seen the light of the day had it not been for the constant care and blessings of my parents and members of our family. I would especially like to thank Sumathi, my soul mate, for her constant love, support and understanding, even when I had to work overnight, on week-ends or on holidays. And of course, to God my thanks have no bounds but are too less still.

Gunasekaran S.
