

CONTENTS

Chapters	Title	Page No.
I	Introduction	1-50
1.1	General Introduction	1
1.2	Sources of Metals in Water	2
1.3	Importance of Heavy Metals	7
1.4	Toxicity of Heavy Metals	8
1.5	Trace Metals and Organic Life	12
1.6	Analytical techniques employed for the determination of metals in Environmental and Biological Samples	16
1.7	Role of Ligands in Analytical Applications	26
1.8	Separation and Preconcentration of trace metals	30
	Scope of the Present Work	39
	References	41
II	Experimental	51-72
2.1	Materials	51
2.1.1	Reagents (Chemicals)	51
2.1.2	Purification of solvents	52
2.1.3	Preparation of buffer solutions	53
2.1.4	Preparation of stock metal solutions	53
2.2	Instruments used in the present study	54
2.3	Instrumental technique	56
2.4	Limit of detection (LOD) and limit of quantification (LOQ)	59
2.5	Synthesis of ligands	59
2.6	Proposed structures of synthesized ligands	64
2.7	Adsorbents	65
2.8	Functionalization of Amberlite XAD resin with ligands	65
2.9	General SPE procedure	71
	References	72

III	Synthesis and characterization of Potassium 2-benzoyl hydrazine carbodithioate (PBHCD) and its application in separation and preconcentration of trace metals in water and leafy vegetables and determination by ICP-AES	73-94
	Results and discussion	76
	References	93
IV	Synthesis and Characterization of 3-(2-nitrophenyl)-1<i>H</i>-1,2,4-triazole-5(4<i>H</i>)-thione (NPTT) and its application for preconcentration of Pb(II), Ni(II), Cu(II) and Cd(II) in water and food samples and determination by ICP-AES	95-120
	Results and discussion	99
	References	119
V	Synthesis and characterization of 3-(2-hydroxyphenyl)-1<i>H</i>-1,2,4-triazole-5(4<i>H</i>)-thione(HPTT) and its application in solid phase extraction of trace metals Cu(II), Fe(II), Co(II) and Mn(II) in environmental and food samples	121-143
	Results and discussion	123
	References	142
VI	Summary	144-147
	Appendix	148-151
