Chapter 1: Science: the Sense, Essence and Quintessence of India from Every Conscience – a Bird’s Eye View of Ancient Indian Meteorology

1 Some milestones in the long journey of Meteorology.......................... 3
2 Cloud Types and their altitudes from the Earth’s Surface.................... 30

Chapter 3: Ambient Air Quality Monitoring at Residential Areas Situated in Different Environments in and Around Tirupati A Well-Known Pilgrimage Site in India

1 Ambient Air Quality Standards for Residential Areas.......................... 77
2 Concentrations of Pollutants in Railway Colony................................ 84
3 Concentrations of Pollutants in Ram Nagar Quarters........................ 84
4 Concentrations of Pollutants in Gandhipuram................................. 85
5 Concentrations of Pollutants in Indiramma Colony............................ 85
6 Concentrations of Pollutants in Rajuvaripally................................. 86
7 Concentrations of Pollutants in P.K. Layout.................................... 86
8 Meteorological Data of Tirupati Region for the years 2009 and 2010........ 91
9 Coefficients of Correlation between Pollutant Concentrations and Meteorological Parameters, Seasonal Variation.................................... 92
10 Coefficients of Correlation between Pollutants in Tirupati Region......... 97
11 Area Wise Seasonal Variation of Coefficients of Correlation between Pollutants in Tirupati................................................................. 97
12 Area Wise Variation of Coefficients of Correlation between Pollutants in Tirupati................................................................. 98

Chapter 4: Ambient Noise Quality Monitoring At Residential Areas With Different Living Environments in and around Tirupati

1 Decibel Levels of Common Sounds.................................................... 104
2 Ambient Air Quality Standards with respect to Noise.......................... 107
3 Accuracy of ‘A’ weighting at temperature 23±5°C................................ 108
4 Recommended Background Noise Levels L_{AN},................................ 110
5 Railway Colony: Monthly Variation of Ambient Noise Quality Levels for 2009-10 ................................................................. 113
6 Gandhipuram: Monthly Variation of Ambient Noise Quality Levels for 2009-10. ......................................................... 114

7 Indiramma Colony: Monthly Variation of Ambient Noise Quality Levels for 2009-10......................................................... 115

8 Ram Nagar Quarters: Monthly Variation of Ambient Noise Quality Levels for 2009-10......................................................... 116

9 Rajuvaripally: Monthly Variation of Ambient Noise Quality Levels for 2009-10......................................................... 117

10 PK Layout: Monthly Variation of Ambient Noise Quality Levels for years 2009-10......................................................... 118

Chapter 5: Meteorological Predictions in the Ancient Indian Almanac Panchaangam versus Modern Observations – A Study over Tirupati Region – A Semi-Arid Tropical Site in India

1 The Twelve Adityas and their Ruling Periods......................................................... 131

2 Solar Days with their English Counterparts and Ruling Planets.......................... 134

3 Nakshatrams and their Modern Counterparts......................................................... 135

4 Seven Naadis and their Associated Effect on Weather........................................ 141

5 The Six Rutus (Seasons) in India........................................................................... 142

6 King, Minister and Lord of Clouds during the years in deliberation.................. 145

7 Basic Cloud Types and Rainfall Trends based on Ancient Knowledge............. 145

8 Ruling Planets (Kings) and their Influence on the Annual Rainfall of that Particular Year........................................................................ 146

9 List of Kaarti Periods with Respective Rainfall Conditions.................................. 146

10 Panchaangam Predictions compared with the Modern Data............................ 158

11 Panchaangam Predictions compared with Monsoonal Averages ..................... 160

12 Comparison of the Predicted effect of Planetary Rulership on Annual Rainfall, with Recorded Data......................................................... 162

13 Traditional Monsoonal Average Rainfall compared with Panchaangam Prediction........................................................................ 163

14 Cloud type Predictions compared with Real-Time Cloud Observations.......... 164

15 Observed Direction of Cloud Origin Compared with Panchaangam Prediction... 165

16 Wind Category based on Wind Velocity................................................................. 168

17 Panchaangam Wind Speed Predictions matched with on-site Measurements.... 169
1 The Twelve Jyotirlingams and their locations in India................................. 175
2 Chapters related to meteorology in the Brihat Samhita and total number of verses (Slokams) contained in each of them................................. 179
3 Rainfall when Venus is situated in Makha star and its four counterparts in the West................................................................. 210
4 Rainfall when Venus is situated in Swaati star and its two counterparts in the East................................................................. 210
5 Rainfall when Venus is situated in Makha star and its four counterparts in the East........................................................................................................ 210
6 Rainfall when Venus is situated in Swaati star and its two counterparts in the West........................................................................................................ 211
7 Rainfall when Venus rises or sets on 8th, 14th or the 15th day of the dark fortnight.................................................................................... 211
8 Rainfall When Saturn is in advance of Venus........................................... 211
9 Rainfall when Mars marches ahead of Venus........................................... 212
10 Rainfall when Jupiter is ahead of Venus................................................... 212
11 Rainfall when Mercury is situated in advance of Venus.......................... 213
12 Rainfall When Jupiter and Venus are aligned in the Sama Saptakam mode.... 214
13 Rainfall during the time of eclipses in various months............................ 214
14 Rainfall during the conjunction of Mercury and Venus............................ 215
15 Rainfall during the conjunction of Mercury and Jupiter........................... 216
16 Rainfall when Jupiter is conjoined with Venus........................................ 216
17 Rainfall during the conjunction of Mars and Saturn................................ 216
18 Aandra Kartari time rainfall during the period of study............................ 217
19 Tirupati rainfall as perceived from the perspective of Aashaadha Poornima wind effect.............................................................. 218
20 Ajmer rainfall as perceived from the perspective of Aashaadha Poornima wind effect.............................................................. 218
21 Shillong rainfall as perceived from the perspective of Aashaadha Poornima wind effect.............................................................. 218
22 Port Blair rainfall as perceived from the perspective of Aashaadha Poornima wind effect.............................................................. 219
23 Tirupati rainfall from the perspective of Lunar Conjunction with Poorvaabhaadra after Aashaadha Poornima .................................................. 220

24 Ajmer rainfall from the perspective of Lunar Conjunction with Poorvaabhaadra after Aashaadha Poornima .................................................. 220

25 Shillong rainfall from the perspective of Lunar Conjunction with Poorvaabhaadra after Aashaadha Poornima .................................................. 220

26 Port Blair rainfall from the perspective of Lunar Conjunction with Poorvaabhaadra after Aashaadha Poornima .................................................. 221

27 Rainfall under various cloud directions in Ajmer .................................................. 221

28 Rainfall under various cloud directions in Tirupati .................................................. 222

29 Rainfall under various cloud directions in Shillong .................................................. 222

30 Rainfall under various cloud directions in Port Blair .................................................. 224

31 Rainfall under various wind directions in Ajmer .................................................. 226

32 Rainfall under various wind directions in Tirupati .................................................. 226

33 Rainfall under various wind directions in Shillong .................................................. 226

34 Rainfall under various wind directions in Port Blair .................................................. 226

35 Table showing initial day of rainfall after the first cloud foetus completes its complete gestation period of 195 days .................................................. 227

36 Dates when rainfall exceeded 8 mm. over Tirupati and its consequential rainfall after the specified period .................................................. 228

37 Dates when rainfall exceeded 8 mm. over Ajmer and its consequential rainfall after the specified period .................................................. 230

38 Dates when rainfall exceeded 8 mm. over Shillong and its consequential rainfall after the specified period .................................................. 230

39 Dates when rainfall exceeded 8 mm. over Port Blair and its consequential rainfall after the specified period .................................................. 231

40 Tirupati seasonal Rainfall from the perspective of Vaayu Dhaarana Days .................. 233

41 Ajmer seasonal Rainfall from the perspective of Vaayu Dhaarana Days .................. 233

42 Shillong seasonal Rainfall from the perspective of Vaayu Dhaarana Days .................. 233

43 Port Blair seasonal Rainfall from the perspective of Vaayu Dhaarana Days .............. 234

44 Validity of the prediction pertaining to retention of rain over Tirupati during the period of study .................................................. 235

63 List of 27 Nakshatrams, their occurrence dates and corresponding rainfall quantities during rainy season of 1995 ........................................................... 252
64 List of 27 Nakshatrams, their occurrence dates and corresponding rainfall quantities during rainy season of 1996 ........................................................... 253
65 List of 27 Nakshatrams, their occurrence dates and corresponding rainfall quantities during rainy season of 1997 ........................................................... 254
66 List of 27 Nakshatrams, their occurrence dates and corresponding rainfall quantities during rainy season of 1998 ........................................................... 255
67 List of 27 Nakshatrams, their occurrence dates and corresponding rainfall quantities during rainy season of 1999 ........................................................... 256
68 List of 27 Nakshatrams, their occurrence dates and corresponding rainfall quantities during rainy season of 2000 ........................................................... 257
69 List of 27 Nakshatrams, their occurrence dates and corresponding rainfall quantities during rainy season of 2001 ........................................................... 258
70 List of 27 Nakshatrams, their occurrence dates and corresponding rainfall quantities during rainy season of 2002 ........................................................... 259

LIST OF FIGURES

Chapter 1: Science: The Sense, Essence and Quintessence of India from Every Conscience – A Bird’s Eye View of Ancient Indian Meteorology

1 Various types of common as well as rare and special clouds ......................... 28

Chapter 2: Experimental Procedures

1 Interior Sketch Diagram of a High Volume Sampler ........................................ 43
2 External view of a High Volume Sampler .................................................... 44
3 Flow Diagram for High Volume Operations .................................................. 49
4 NO₂ Sampling Train .................................................................................. 52
5 SO₂ Sampling Train .................................................................................. 57
6 Central Orifice Flow Control ...................................................................... 58

Chapter 3: Ambient Air Quality Monitoring at Residential Areas Situated in Different Environ in and Around Tirupati - A Well-Known Pilgrimage Site in India

1 Map of Tirupati showing the sampling sites ............................................. 80
2 On-Site Air Quality Monitoring at Tirupati Using a Respirable Dust Sampler... 82
3 Monthly Variations of SPM and PM$_{10}$ Concentrations......................... 87
4 Monthly Variations of SO$_2$, NO$_x$ and CO Concentrations..................... 88
5 Seasonal Variation of SPM and PM$_{10}$ Concentrations.......................... 88
6 Seasonal Variation of SO$_2$, NO$_x$ and CO Concentrations....................... 89
7 Measurement of Meteorological Parameters......................................... 92
8 Relation between Temperature and Pollutants. .................................... 93
9 Effect of Relative Humidity (RH) on Pollutants..................................... 94
10 Influence of Rainfall on Pollutants.................................................... 95
11 Impact of Wind Velocity on Pollutants.............................................. 96

Chapter 4: Ambient Noise Quality Monitoring At Residential Areas With Different Living Environments in and around Tirupati

1 Map of Tirupati showing the sampling sites............................................. 108
2 Lutron SL-4001 Digital Hand-held Sound Level Meter ............................ 108
3 On-site Ambient Noise Quality Monitoring Using a Hand-held Sound Level Meter.................................................................................................................. 112
4 Ambient Noise Level Monthly Variation for Six Areas of Study during 2009-2010.................................................................................................................. 121
5 Quarterly Variance of Ambient Noise Levels during the Period of Study...... 122

Chapter 5: Meteorological Predictions in the Ancient Indian Almanac Panchaangam versus Modern Observations – A Study over Tirupati Region – A Semi-Arid Tropical Site in India

1 Map of India Showing the Place of Study, Tirupati................................. 132
2 An image of the Pidaparthi Panchaangam used for the present study........ 144
3 Raahu and Ketu shown as Northern and Southern Lunar nodes respectively...... 149
4 Comparison of Panchaangam Rainfall Prediction with Recorded Maximum Rainfall on a Given Day of the Year............................................................... 159
5 Comparison of Panchaangam Rainfall Prediction with Recorded Yearly Mean Rainfall.............................................................................................................. 159
6 Comparison of Panchaangam Rainfall Prediction with Recorded Average South-West Rainfall, Average North-East Rainfall and Average of Traditional Monsoon Rainfall .......................................................................................................................... 161
7 Wind Directions on a 16-point Compass, Each Separated by an Angle of 22.5°... 167
Chapter 6: Meticulous and Mentorious Meteorology Enshrined in the *Brihat Samhita* – A Study over Four Indian Regions Situated in Diverse Climatic Zones

1. *Varaaha Mihira and Brihat Samhita* ................................................................. 177

2. Map showing the location of the four regions chosen for the study: Tirupati, Ajmer, Shillong and Port Blair ................................................................. 206

3. Cloud Direction versus Rainfall over the four regions during the period of study... 223

4. Wind direction versus rainfall over the four regions during the period of study... 225

5. Predicted Rainfall versus actual Rainfall based on the *Nakshatram* of initial rainfall ................................................................. 241

6. Graphical User Interface of *Nakshatram* Occurrence Dates Calculator ........ 247

7. *Nakshatram* Occurrence Dates Calculator: Selection of a *Nakshatram* ........ 247

8. *Nakshatram* Occurrence Dates Calculator: Selection of a Year ................ 248

9. *Nakshatram* Occurrence Dates Calculator Output Showing Selected *Nakshatram*, selected year and Dates of occurrence of the *Nakshatram* during the year’s Rainy season ................................................................. 248

Chapter 7: Scope for Future Work

1. A Blue Haze over Hilly Regions ......................................................................... 268

2. The *Crepuscular Rays* from Clouds ................................................................. 269

3. The Tangent Arc of a Halo .................................................................................. 269

4. A Primary and a Secondary Rainbow ................................................................. 270

5. The ‘Sun Dog’ Type Halo .................................................................................... 270

6. The ‘Corona’ Type Halo Around The Moon ....................................................... 270

7. The Apparent ‘Red’ Sunrise due to Diffraction of Light by Aerosols and Particulate Matter ......................................................................................... 271

8. The ‘Sun Pillar’ produced by Atmospheric Diffraction of Sunlight by Cloud Droplets ................................................................. 271

9. The Phenomenon of Cloud ‘Iridescence’ ............................................................ 272
