ACKNOWLEDGEMENT

I sincerely express my heartfelt gratitude and thankfulness to each and every one concerned with me either directly or indirectly in connection with this research work and throughout my auspicious career. Only with whom and by whom, I am able to attain the current position.

First and foremost, I express my heart-felt thanks to my mentor, Dr. R. Balasubramanian, Professor and Head, Department of Mechanical Engineering, Government College of Engineering, Salem, Tamilnadu (TN), India, for his constant guidance and continuous encouragement without which this thesis would not have materialized. After the preliminary literature review, he said a precept, “Srinivasan, if you develop a correlation for condensation over horizontal integral fin tubes, your thesis will be over”. This mantra has fostered me to the current status. I fell myself to have achieved the state what he said five years back.

I express my sincere thanks to Dr. C. Sivananthan, Former Head of Department for selecting me as a part-time Ph.D. research scholar without which this work could not have been initiated. I sincerely thank Dr. S. Arumugam, the Principal, Dr.S.Shanmugasundaram, Professor & Head of Mechanical Engineering (PG), Dr. V.P. Arunachalam, Professor & Head of Mechanical Engineering (UG), and all the faculty of the Mechanical Engineering Department, Government College of Technology, Coimbatore, TN, India, for providing ready help at all times without which this research work would not have been completed.

I am deeply beholden to Dr. J. Kumar, my professor, who introduced “Heat Transfer” to me. My involvement in heat transfer is solely due to his excellent and thought provoking lectures during 1987. He has shaped my career during 1991 to 1999 as the Head of Mechanical Engineering Department at Kongu Engineering College (KEC), Perundurai, Erode, TN, India, under whom I worked for 8 years. Only he had made me to register for this Ph.D. program. I thank Prof. N. Anbuchezhian for his assistance in the Ph.D. registration process. I thank Dr. N. Arumugam, former Principal, KEC, who had permitted me to register for Ph.D. knowing my inherent thrust for research.

I can never forget Dr. U.N. Gaitonde, Professor of Mechanical Engineering, Indian Institute of Technology, Mumbai, India. He was my supervisor for my M.Tech. thesis work where he has thrown me into the world of “Numerical Heat Transfer”. He has taught me how
to walk along the research path in a simple way towards the generally unknown target. By remote control, he has contributed significantly in this research work too.

I am very much thankful to Dr. Kannan N. Iyer, Professor of Mechanical Engineering, Indian Institute of Technology, Mumbai, India for his fruitful midnight discussions during the various conference meets. It has helped me in developing the wonderful condensate retention technique that forms the chapter-5 of this thesis.

I cordially express my sincere thanks to Dr. N. Balakrishnan, Assistant professor, Department of Aerospace Engineering, Indian Institute of Science, Bangalore, who has provided the necessary expertise for making precise measurements during the development of the experimental setup. Without his timely help, the crucial measurements like cooling water temperature rise would not have materialized better.

I am indebted to Prof. S. P. Sukhatme, Former Director, Indian Institute of Technology, Mumbai, India. I can never forget his excellent lectures during my M.Tech studies at Indian Institute of Technology, Mumbai, India. It has made me to render myself to this wonderful teaching profession. He guided many researches in the area of condensation over finned tubes for more than 20 years. I sincerely thank him for allotting sufficient time, despite his extremely busy schedule, to discuss with me during the ASME / ISHMT Joint Heat and Mass Transfer conference held at Pune, India during January 2000. His directions have considerably helped me during the correlation of experimental data which is a part of chapter-8 of this thesis.

I express my heartfelt thanks to Prof. H. C. Franz Durst, Head of the Institute, Institute of Fluid Mechanics, Friedrich-Alexander University, Erlangen, Germany, and Dr. R. K. Shah, Delphi Automotive Systems (Harrison Thermal Systems), New York, USA, for their valuable discussions during FMFP conference held at Indian Institute of Technology, Delhi, India, during December 1998 and ASME / ISHMT Joint Heat and Mass Transfer conference at Pune, India during January 2000. It has made me to study the condensate drainage patterns to a certain extent (chapter-5). I sincerely thank Prof. H. Honda, Institute of Advanced Material Study, Kyushu University, Japan, for providing me the necessary properties of Ozone safe refrigerants which are used during the correlation development (chapter-8). I am thankful to Prof. S. P. Venkateshan, Prof. Sarit Kumar Das, and Prof. A. R. Balakrishnan, of Indian
Institute of Technology, Chennai, India, for their useful suggestions and their help in using IIT library for literature survey.

I thank Thiru. K. Paramasivam, Former correspondent of KEC, for having appointed me as a faculty of Mechanical Engineering at KEC and for having provided me a great opportunity to take up my research. I take this opportunity to thank Mr. C. Devarajan, Correspondent, KEC and all the managing trustees for providing me necessary support. I wish to express my profound thanks to Dr. K. Subramanian, The Member Secretary, Tamil Nadu State Council for Science and Technology, Chennai for providing partial financial assistance to attend and present a part of this research work in a world forum at the International Conference on Advances in Fluid Mechanics 2000 held at Montreal, Canada during May 2000. It has really provided an opportunity to fly and interact with experts spread over the world.

I am really thankful to Dr. A. M. Natarajan, Principal, Kongu Engineering College, Perundurai, for permitting me to carry out this research work. During my serious research work, he used to assign various administrative responsibilities that may appear distracting at times. But this has really provided an opportunity to learn the art of “multi-tasking”. By applying the same in the present investigation, I could able to walk on three parallel tracks, viz., Experimental work, Numerical work and the Correlation development, and reach the destinations in the respective tracks simultaneously.

I express my sincere thanks to Mr. K. Mayilsamy, Faculty, Department of Mechanical Engineering, Institute of Road and Transport Technology, Erode, TN, India for his support in all respects over the years. We two have travelled together to almost all the related conferences held in India. We used to discuss mutually which has made us to progress significantly in our respective research areas.

As this Ph.D. work is a part-time registration, without many indirect supports from my co-faculty, it is very difficult to make considerable progress. I express my devoted and sincere thanks to all my colleagues and the supporting staff members of Mechanical Engineering Department, KEC, for their great assistance over the past five years. I thank my Head of Department, Prof. R. Deivasigamani, for allotting the subjects of my interest which has made me to devote ample time for research. I specifically thank my colleague,
Prof. P. P. Sethusundaram, for supporting me during the Laboratory classes which has provided considerable time for research work. I thank Mr. KCK. Vijayakumar for his assistance in running most of my computer codes for various case studies. I extend my sincere thanks to Mr. R. Selvakumar, Faculty, Dept. of Mathematics, Kongu Engineering College, Perundurai, for his assistance in the problem formulation part of the Numerical Analysis.

I sincerely thank my best friend and colleague Prof. C. Jegadheesan for his great help at crucial times. The special thanks are due to him and to Dr. K. Rajaraman, Dept. of English, for their painstaking proof-reading exercise.

For placing my student friends at the end should not be mistaken. Though I have placed them at the end of this acknowledgement, they are placed at the forefront in their carrier because they are my students. They have spent several white nights with me in the laboratory during the extensive experiments. Since each one has his own contributions, I don't list them because I don't want to make any discrimination. I sincerely thank every one. Really the thought provoking questions of those young minds have contributed a lot in this thesis work.

Finally, I devote my heartfelt thanks to my father Mr. S. Shanmugam and my mother Mrs. Chellammal Shanmugam for their love and affection and educating me from their hard-earned money. During the period of this research, my wife Mrs. Vijaya Srinivasan has taken most of my personal responsibilities at her hands. I don't want to disappoint her by simple thanks. Of course, my young sons master PSS. Srivignesh (6 years old) and master PSS. San Vinoth (2 years old) have missed me a lot. Instead of playing with them and telling bedtime stories, I sat in front of the computer terminal for most of the time. I hope they will excuse me.

P.S.S. SRINIVASAN
