# LIST OF TABLES

2.1. Approximate volume of CO$_2$ measured to harden a silicate / sand mix 2.18

2.2. Comparison of the properties of the mixtures with high and low SiO$_2$: Na$_2$O ratios sodium silicates. 2.27

2.3. Conversion factors for calculating the approximate theoretical specific surface from the mechanical grading 2.122

2.4. Temperature Vs Compressive Strength in Moulding Sand 2.148

2.5. Changes in structure of $\alpha$ - quartz 2.151

2.6. Inversion in Tridymite and Cristobalite 2.151

4.1. Sample Calculation for Fineness Number 4.24

4.2. Sample Calculation for Na$_2$O Content 4.26

5.1. pH Value 5.7

5.2. AFS Number 5.9

5.3. ADV (Acid Demand Value) 5.11

5.4. Na$_2$O Content 5.13

5.5. Total Clay Content 5.16

5.6. Permeability 5.18

5.7. Water Absorption 5.21

5.8. Compactability 5.24

5.9. Mould Hardness 5.26

5.10. L.O.I. 5.28

5.11. Compression Strength 5.30

5.12. Surface finish of step cone casting by comparison method 5.32
5.13. Surface finish of SFSA casting block by comparison method 5.32
5.14. By Varying Air Pressure in Scrubber 5.41
5.15. By Varying Air Pressure in Fluidized Bed 5.41
5.16. By Varying Temperature in Fluidized Bed 5.42
5.17. By Varying Temperature in Scrubber 5.43
5.18. By Varying CO₂ Gassing Time in the Mould 5.44
5.19. By Varying Percentage of Binder added to Moulding Sand 5.45
5.20. Reclamation by only Scrubbing Process by Eliminating Fluidization (Before Pouring). 5.46
5.21. Reclamation by only Scrubbing Process by Eliminating Fluidization (After Pouring). 5.47
5.22. By Varying Sand Retention Time in Fluidized Bed 5.49
5.23. By Varying Sand Retention Time in Fluidized Bed - Only Fluidization process by Eliminating Scrubbing 5.49
5.24. By Varying CO₂ Gassing Pressure while Moulding 5.50
5.25. By Varying sand Retention Time in Scrubber 5.51
5.26. Reclamation of Sodium Silicate / CO₂ Sand – Before Pouring 5.53
5.27. Reclamation of Sodium Silicate / CO₂ Sand – After Pouring 5.53
5.28. Calculation Reference for Cost Analysis 5.85
