

## LIST OF FIGURES

Fig. No.	TITLE	Page
1.1	Geometry of a 'CFT'	2
1.2	Division of flow field	4
3.1	Geometry of a CFT Nozzle	18
3.2.a	Spiral Vortex flow pattern	20
3.2.b	Spiral vortex portion of the nozzle	23
3.2.c	Final nozzle profile of a spiral vortex nozzle	24
3.3	Development of circular arc shaped nozzle	26
3.4	The computational domain and boundary conditions of the nozzle	28
3.5.a	Display of selected nodes	32
3.5.b	Discretized nozzle depicting the elements	33
3.6.a	Pressure distribution in a nozzle	36
3.6.b	Total velocity variation in a nozzle	37
3.7	Vector plot of total velocity	39
3.8	Iso-stream function contours in a flow through nozzle	40
3.9.a	Variation of pressure at the mid section along the nozzle	41
3.9.b	Variation of velocity at the mid section along the nozzle	42
3.10.a	Variation of velocity section across the nozzle	43
3.10.b	Variation of velocity at exit of the nozzle	44
3.11.a	Effect of nozzle walls on flow angle	46
3.11.b	Effect of nozzle walls on nozzle exit velocity	47
3.12.a	Effect of angle of attack on flow deviation	48
3.12.b	Effect of angle of attack on total velocity	49
3.13.a	Effect of nozzle entry arc on flow deviation	50
3.13.b	Effect of nozzle entry arc on total velocity	51
3.14.a	Effect of flow rate on flow deviation	53
3.14.b	Effect of flow rate on total velocity	54
3.15.a	Effect of head on flow deviation	56
3.15.b	Effect of head on total velocity	56a
4.1	Geometry of runner blade	59
4.2	Line diagram of first stage blade passages of 18-blade runner	68

4.3	Discretized runner first stage (18-blades)	69
4.4	Total velocity distribution	71
4.5	Vector plot of total velocity ( $N_b=18$ )	72
4.6	Total velocity distribution ( $N_b=24$ )	73
4.7	Vector plot of total velocity ( $N_b=24$ )	75
4.8	Total velocity distribution ( $N_b=30$ )	76
4.9	Vector plot of total velocity ( $N_b=30$ )	77
4.10	Effect of number of blades on 1 <sup>st</sup> stage exit flow for the C-S nozzle	79
4.11	Effect of number of blades on relative velocity at 1 <sup>st</sup> stage exit flow for the C-S nozzle	80
4.12	Effect of number of blades on 1 <sup>st</sup> stage exit flow for the S-S nozzle	82
4.13	Effect of number of blades on relative velocity at 1 <sup>st</sup> stage exit flow for the S-S nozzle	83
4.14	Effect of nozzle shape on 1 <sup>st</sup> stage exit flow for $N_b = 24$	84
4.15	Effect of nozzle shape on relative velocity at 1 <sup>st</sup> stage exit, $N_b = 24$	85
5.1	Line diagram of the test facility	89
5.2	Arrangements of the water inlet system	91
5.3	Loading system	93
5.4	Placement of the turbine nozzles	99
6.1	Performance of CFT with $\alpha_1 = 16^\circ$ , $N_b = 20$	105
6.2	Performance of CFT with $\alpha_1 = 16^\circ$ , $N_b = 24$	106
6.3	Performance of CFT with $\alpha_1 = 16^\circ$ , $N_b = 30$	107
6.4	Performance of CFT with $\alpha_1 = 24^\circ$ , $N_b = 20$	109
6.5	Performance of CFT with $\alpha_1 = 24^\circ$ , $N_b = 24$	110
6.6	Performance of CFT with $\alpha_1 = 24^\circ$ , $N_b = 30$	111
6.7	Effect of angle of attack on CFT performance ( $N_b = 24$ )	112
6.8	Effect of angle of attack on maximum efficiency	113
6.9	Effect of number of blades on CFT performance for $\alpha_1 = 16^\circ$	115
6.10	Effect of number of blades on CFT performance for $\alpha_1 = 24^\circ$	116
6.11	Effect of number of blades on maximum efficiency	117
6.12	Effect of nozzle shape on performance of CFT with $\alpha = 16^\circ$ , $N_b = 24$	120
7.1	Effect of flow rate on efficiency of nozzle-1	124
7.2	Effect of flow rate on efficiency on nozzle-2	125

7.3	Performance of individual nozzles for $Q' = 0.0614$	126
7.4	Performance of individual nozzles for $Q' = 0.0718$	127
7.5	Effect of flow fraction on efficiency $Q' = 0.0614$	129
7.6	Effect of flow fraction on efficiency $Q' = 0.0718$	130
7.7	Effect of flow fraction on maximum efficiency	131
