LIST OF TABLES

Tab. 4.1 FCAW Process variables and their levels.
Tab. 4.2 Design matrix for the experiments.

Tab. 5.1 Observed values of bead parameters and heat input.
Tab. 5.2 Measured ferrite content of stainless steel overlays.
Tab. 5.3 Estimated values of regression coefficients.
Tab. 5.4 Calculation of variance for testing adequacy of models.
Tab. 5.5 Estimated values of significant coefficients of models.
Tab. 5.6 Comparison of adjusted square multiple 'R' values and standard error estimates between actual and reduced models.
Tab. 5.7 Comparison of actual and predicted values of the weld bead parameters.
Tab. 5.8 Effect of heat input on bead parameters.
Tab. 5.9 Effect of constant heat input of 6.0 kJ/cm on bead parameters.
Tab. 5.10 Effect of constant heat input of 6.5 kJ/cm on bead parameters.
Tab. 5.11 Effect of constant heat input of 7.0 kJ/cm on bead parameters.
Tab. 5.12 Effect of constant heat input of 7.5 kJ/cm on bead parameters.
Tab. 5.13 Effect of constant heat input of 8.0 kJ/cm on bead parameters.
Tab. 5.14 Effect of voltage on penetration for constant heat input.
Tab. 5.15 Effect of voltage on reinforcement for constant heat input.
Tab. 5.16 Effect of voltage on bead width for constant heat input.
Tab. 5.17 Effect of voltage on dilution for constant heat input.
Tab. 5.18 Effect of wire feed rate on penetration for constant heat input.
Tab. 5.19 Effect of wire feed rate on reinforcement for constant heat input.
Tab. 5.20 Effect of wire feed rate on bead width for constant heat input.
Tab. 5.21 Effect of wire feed rate on dilution for constant heat input.
Tab. 5.22 Effect of welding speed on penetration for constant heat input.
Tab. 5.23 Effect of welding speed on reinforcement for constant heat input.
Tab. 5.24 Effect of welding speed on bead width for constant heat input.

Tab 6.1 Results of sensitivity analysis (direct effect)
Tab 6.2 Results of sensitivity analysis (interaction effect of P and R)
Tab 6.3 Results of sensitivity analysis (interaction effect of P and AR)

Tab 7.1 Chemical Composition of Stainless steel overlay
Tab 7.2 Chromium and Nickel equivalents of cladding
Tab 7.3 Mechanical test results of optimized single layer stainless steel cladding
Tab 7.4 Double loop EPR test conditions
Tab 7.5 Double loop EPR test results of as welded 316 L stainless steel overlays
Tab 7.6 Streicher and Majidi Table
Tab 7.7 Calculated values of pitting resistance equivalent
Tab 7.8 Comparison of predicted and measured chemical composition of stainless steel cladding
Tab 7.9 Comparison of predicted and measured ferrite content of stainless steel cladding
Tab 7.10 Mode of solidification in cladding
