CONTENTS

Abstract

General Introduction and Review of Literature .............................................. 1-30

Scope and Objective of the Present Investigation ........................................ 31-32

Chapter 1: Enumeration of Bacteria and Fungi Associated with Soft Tissue Infection in Diabetic Patients. ................................................................. 33-46
   ❖ Introduction
   ❖ Material and Methods
   ❖ Results and Discussion

Chapter 2: Evaluation of in vitro Picrorhiza kurroa (rhizome) and Solanum xantocarpum (root and fruit) extracts for Antimicrobial Properties against Bacteria and Fungi and In vitro Antioxidant Activity studies. ..................... 47-95
   ❖ Introduction
   ❖ Material and Methods
   ❖ Results and Discussion

Chapter 3: In vivo evaluation of effective plant extracts on antidiabetic properties in streptozotocin- induced diabetic rats. ........................................ 96-130
   ❖ Introduction
   ❖ Material and Methods
   ❖ Results and Discussion

Chapter 4: Histopathological Studies of Plant Extract Treated and Control Diabetic Rats. .............................................................. 131-151
   ❖ Introduction
   ❖ Material and Methods
   ❖ Results and Discussion

Summary and Conclusion ........................................................................ 152-155

Reference .............................................................................................. 156-181
