Acknowledgements

It is a pleasure to thank the inspiring people who made this thesis possible.

I am especially grateful to my Ph.D. guide, Dr. Gulnar Sharma – Director, JDBIMS, for her constant and patient guidance during my research and study at JDBIMS. Her untiring energy and enthusiasm in research motivated me to a great extent. She was always accessible and willing to help with the research, making it an exceptionally rewarding time for me.

I cannot thank her enough for her sensitivity, outstanding guidance, sound advice, and lots of good ideas. I would have been really lost without her.

I am in deep gratitude of S.N.D.T. for providing me this opportunity of research work and I would like to thank the Pro-Vice Chancellor Dr. Mantha, and Vice Chancellor Dr. Chandra Krishnamurthy.

I would also like to thank the staff at JDBIMS, for helping me in different ways to make the research work run smoothly.

The concept for this research was initiated by several discussions I have had with my peers about technical communication and its rightful place in the Information Technology industry. Their insights and inputs have always been with me throughout the course of this research and I would like to record my appreciation for it.

I would like to thank my clients and colleagues in the workplace who contributed to my research work and gave a helping hand whenever needed.

Though the family members always help us in all possible ways to complete our tasks, we seldom acknowledge it formally. I take this wonderful opportunity to thank my husband Dinesh and my son Ashwin for providing a loving and caring environment for me. They constantly rallied round and cheered me to complete this research.

Lastly, and most importantly, I wish to thank my parents, Mr. Madhusudan Dalvi and Mrs. Pramila Dalvi. They inculcated in me logical approach and independence of thought. They guided me, supported me and encouraged me always. To them I dedicate this thesis.
