STUDY PLAN
(A) **AIM OF THE STUDY** -

Periphery of the retina is described as an area which is anterior to the equator. The present study aims to study various pathological lesions occurring in this area.

(B) **HYPOTHESIS** -

The retinal periphery is supposed to be site of predilection for a number of potentially dangerous pathological lesions including retinal breaks.

(C) **STUDY DESIGN** -

It is a hospital based study in which the myopic eyes will be compared the emmetropic eyes.

(D) **STUDY VARIABLES** -

Incidence of the lesion, age sex and involvement of different quadrants.
