

## ACKNOWLEDGMENT

In undertaking this research work, the author has received help spontaneously from various sources and from friends. He wishes to acknowledge their help sincerely and with the utmost gratitude and appreciation that it deserves.

At the outset, the author wishes to state that as he is an administrator, he has had to acclimatise himself with the academic orientation which was warranted in undertaking this study. Abundantly this was forthcoming through his guide and supervisor Dr. K.Rajaratnam, M.A., Ph.D (London), Director, Center for Research on New International Economic Order, Madras. The author was aware of the amount of anguish, personal suffering and loss that his guide had passed through during the currency of his work. Despite all this, his guide and supervisor has whole heartedly and in a positive and friendly manner motivated him and patiently guided him. The Thesis would not have been completed without the scholarly suggestions and sustained help of his guide for which the author is deeply indebted to him.

In the formulation of models, their estimation and in the analysis of results, the author received valuable guidance at various stages from several distinguished friends. Mention must be made of the untiring help and guidance received at the

formulation stage from Dr. C. Arputharaj, Director incharge, Agro-Economic Research Centre, University of Madras. At a later stage, Dr. S.R. Subramanian, one of the eminent Agricultural Economists, Director, Centre for Agricultural and Rural Development Studies, Tamil Nadu Agricultural University, Coimbatore, came to the rescue of the author and reinforced his efforts in accomplishing this task. Thiru M. Chinnadurai, Assistant Professor, Department of Agricultural Economics, of the same University was always available for consultation. The author wishes to thank them profusely without any reservation. The author wishes to place on record his gratitude for the innovative suggestions and help received from Thiru Shantharam, Assistant Professor of Statistics Loyola College and Thiru Rajayyan, Deputy Director (Retd.) of the Department of Statistics, Government of Tamil Nadu.

When the author commenced his research work some time ago, he had started gathering data from various sources and at several places. When he was away in the University of Leeds, U.K. for his Post Graduate studies in Business administration, he was able to utilise his spare time and gathered data from the library of the University of Leeds. From then on, he was able to secure assistance from the Department of Statistics and Directorate of Evaluation and Applied Research, Government of Tamil Nadu, Madras. Moreover, several others in different capacities also had helped the author in collating and typing out the essays and the material

thus collected. It is very difficult individually identifying all those who helped the author in this endeavour. Therefore, it is fitting to place on record the services and assistance rendered by all those known and unknown persons in their individual and official capacity. I am grateful to all of them.

My thanks are also due to my wife Tmt. Jothilakshmi and my three children for their encouragement and support.
