List of Figures

1.1 Testing process ................................................................. 2
1.2 Testing process using test cases ............................................ 2
2.1 Mapping of Fault - factor - module (a) Project A (b) Project B .......... 24
2.2 Mapping between Test Case and Requirement .......................... 36
2.3 Test screen - Defect view ...................................................... 37
2.4 Mapping between Faults and Requirements ............................... 38
2.5 Graph of RFV Vs Mean ASFD for all the five projects .................. 39
2.6 Comparison of rate of fault detection of Random testing and proposed prioritized testing (a) Project1 (b) Project2 (c) Project3 (d) Project4 (e) Project5 ........................................... 42
2.7 Comparison of the proposed prioritization technique with other prioritization schemes (a) Cosmosoft - ESSP (b) Tech Zone – JAVA … 49
3.1 Fault - factor-module (a) Project-A (b) Project-B ....................... 55
3.2 Mapping between Test Case and Requirement (factor weight)......... 63
3.3 Calculation of fault severity .................................................. 70
3.4 Mapping between Faults and Requirements ............................... 70
3.5 Comparison of rate of fault detection of Random test and proposed prioritized test (a) Case study-1 (b) Case study- 2 .......... 72
3.6 Contribution of factors .......................................................... 76
4.1 \textit{ReqSatTcc} Metric for \textit{Addtl} _TCP ........................................ 91
4.2 \textit{ReqSatTcc} Metric for \textit{Total} _TCP ....................................... 92
4.3 \textit{ReqSatTcc} Metric for \textit{Initial ordering} .................................. 92
4.4 Comparison of three techniques ............................................. 93
5.1 Proposed Fuzzy Model .......................................................... 102
5.2 Fuzzy Input membership functions ........................................ 103
5.3 Fuzzy input to the factors ...................................................... 110
5.4 Mapping Test cases to Requirements .............................................. 116
5.5 Comparison of rate of fault detection of Random testing and
Prioritized testing (a) Project 1 (b) Project 2 .................................... 118
5.6 Comparisons of ASFD and PI (a) Project 1 (b) Project 2 ............... 120
5.7 Comparison of rate of fault detection of Random testing and
Prioritized testing (a) Project 1 (b) Project 2 .................................... 122
6.1 Sample Test cases, Faults identified and its Execution time ............ 132
6.2 Comparison of Prioritizations....................................................... 133
6.3 The Process of genetic algorithm................................................. 134
6.4 An example of crossover and mutation in a generic GA ............... 139
6.5 Proposed Prioritization Algorithm ............................................ 141
6.6 Proposed GA Prioritization Infrastructures ................................ 143
6.7 Crossover with Random Crossover Point .................................... 147
6.8 Selected random number is less than the mutation probability
(0.005<.010) so the individual is mutated (T_2 by T_13) ...................... 148
6.9 In the special case that the test subtuple already contains all
tests from the original tests suite, mutation is achieved by swapping
the test at the designated point with the test that succeeds it ............ 149
6.10 Overview of GA based prioritization implementation .................. 151
6.11 Case Study Applications ............................................................ 152
6.12 An overview of the analysis system ........................................... 155
6.13 GA APFDs and Time Results
(a) Code coverage (b) User Time Overhead ................................... 157
6.14 Comparison of ATEI of Project -1 for the proposed techniques .... 164
6.15 Comparison of ATEI of Project-1 and Project-2
for the proposed techniques ......................................................... 164
