List of Figures

- Figure 2.1: Diagram showing the states of a solution (Temperature Vs Concentrations) ......................................................... 42
- Figure 2.2: Photograph of CTB (Constant Temperature Bath) .................. 51
- Figure 3.1: Example of extra cavity SHG ............................................. 61
- Figure 3.2: Showing Linear and Nonlinear response ............................. 63
- Figure 3.3: Refractive Index of e-ray and o-ray in negative uniaxial crystals ........................................................................ 64
- Figure 3.4: Refractive indices of e-ray and o-ray in negative uniaxial crystals frequencies $\omega$ and $2\omega$ showing phase matched direction of propagation ................................................................. 71
- Figure 3.5: a) Difference Frequency Generation, b) Second Harmonic Generation, c) Sum Frequency Generation, d) Optical Rectification ............. 73
- Figure 3.6: Schematics Pump beam a) Laser and b) Optical Parametric Oscillator ................................................................. 76
- Figure 3.7: Showing the energy conversion in a) Laser and Optical Parametric Oscillator ......................................................... 76
- Figure 3.8: Example of a Longitudinal Field Pockel Cell illustrating the induced birefringence ......................................................... 80
- Figure 3.9: (a) Four Wave Mixing, (b) Degenerate Four Wave Mixing, (g) Third Harmonic Generation ......................................................... 83
- Figure 3.10: Third Harmonic Generation through (a) Second order process $\chi^{(2)}$, (b) Third order process $\chi^{(3)}$ ......................................................... 84
- Figure 3.11: Self guiding wave ................................................................... 85
- Figure 4.1: Solubility curve of Pure KDP and Glycine doped and mixed KDP ........................................................................ 117
- Figure 4.2: Photograph of Pure KDP (a) KDP and Glycine doped and mixed KDP seeds, (b) Pure KDP bulk single crystal, (c) and (d) 2 mole% ,6 mole% Glycine doped KDP and (e) and (f) Glycine mixed KDP in the ratio 1.2:1, & 2.4:1 bulk single crystal ................................................................. 120
- Figure 4.2: (g) Photograph of cutting and polishing Glycine doped, mixed KDP bulk single crystals ................................................................. 121
- Figure 4.3: (a) The Powder XRD pattern of Pure KDP, (b) The Powder XRD pattern of 2 mole% Glycine doped KDP ......................................................... 126
- Figure 4.3: (c) The Powder XRD pattern of 6 mole% doped KDP and (d) The Powder XRD pattern of Glycine mixed KDP in the ratio 1.2:1 ......................................................... 127
- Figure 4.3: (e) The Powder XRD pattern of Glycine mixed KDP in the ratio 2.4:1 ........................................................................ 128
- Figure 4.4: FTIR Spectrum of Pure KDP and (a) FTIR Spectrum of 2 mole% Glycine doped KDP ......................................................... 132
- Figure 4.4: (b) FTIR Spectrum of 6 mole% Glycine doped KDP ................. 134
Figure 4.4: (c) FTIR Spectrum of Glycine mixed KDP in the ratio 1.2:1...135
Figure 4.4: (d) FTIR Spectrum of Glycine mixed KDP in the ratio 2.4:1...138
Figure 4.5: UV-Visible Spectra of Pure KDP, Glycine doped KDP and mixed KDP.................................................................139
Figure 4.6: (a) TGA Thermogram of 6 mole % Glycine doped KDP & (b) TGA Thermogram of Glycine mixed KDP in the ratio 1.2:1..........................144
Figure 4.6: (c) TGA Thermogram of Glycine mixed KDP in the ratio 2.4:1...145
Figure 4.7: (a) DSC Thermogram of 6 mole% Glycine doped KDP..............145
Figure 4.7: (b) DSC Thermogram of Glycine mixed KDP in the ratio 1.2:1 & (c) DSC Thermogram of Glycine mixed KDP in the ratio 2.4:1.........................147
Figure 5.1: Solubility curve of pure Di-Sodium Hydrogen Phosphate(DSHP) and Glycine mixed DSHP........................................................................158
Figure 5.2: Photograph of (a) Pure DSHP and Glycine mixed DSHP seed NLO Crystals, (b) and (c) Pure DSHP bulk NLO single crystals, (d) and (c) Glycine mixed DSHP bulk NLO single crystal in the ratio 1.6:1, 2.6:1..................162
Figure 5.3: (a) The Powder XRD pattern of Pure Di-Sodium Hydrogen Phosphate.................................................................166
Figure 5.3: (b) & (c) The Powder XRD pattern of Glycine mixed DSHP in the ratio 1.6:1 and 2.6:1.........................................................168
Figure 5.4: (a) FTIR Spectrum of Pure Di-Sodium Hydrogen Phosphate.................................................................175
Figure 5.4: (b) FTIR Spectrum of Glycine mixed DSHP in the ratio 1.6:1 and (c) Glycine mixed in the ratio 2.6:1.................................................................176
Figure 5.5: UV-Visible Transmission Spectra of (a) Pure DSHP and (b) Glycine mixed DSHP in the ratio 1.6:1 and 2.6:1(Wavelength (nm) Vs Transmittance (%))..................................................................180
Figure 5.6: (a) TGA Thermogram of Pure DSHP and (b) TGA Thermogram of Glycine mixed DSHP in the ratio 1.6:1.........................................................183
Figure 5.6: (c) TGA Thermogram of Glycine mixed DSHP in the ratio 2.6:1.................................................................185
Figure 5.7: (a) DSC Thermogram of Pure DSHP.................................................................185
Figure 5.8: (b) DSC Thermogram of Glycine mixed DSHP in the ratio 1.6:1.................................................................186
Figure 5.8: (c) DSC Thermogram of Glycine mixed DSHP in the ratio 2.6:1.................................................................187
Figure 6.1: Solubility Curve of Thiourea doped DSHP and Pure DSHP........197
Figure 6.2: Photographs of 2 mole%, 4 mole%, 6 mole% Thiourea doped DSHP bulk single NLO crystals.................................................................199
Figure 6.3: (a) The Powder XRD Pattern of 2 mole% Thiourea doped DSHP and (b) The Powder XRD Pattern of 6 mole% Thiourea doped DSHP.........203
Figure 6.4: (a) FTIR Spectrum of 2 mole% Thiourea doped DSHP...............206
Figure 6.4: (b) FTIR Spectrum of 4 mole% Thiourea doped DSHP..............207
Figure 6.4: (b) FTIR Spectrum of 4 mole% Thiourea doped DSHP .......... 208
Figure 6.5: UV-Spectrum of 2 mole%, 6 mole%, Thiourea doped DSHP
compare with Pure DSHP, Glycine mixed DSHP ........................................ 210
Figure 6.6: (a) TGA Thermogram of 2 mole% Thiourea doped DSHP .......................................................... 214
Figure 6.7: (a) TGA Thermogram of 6 mole% Thiourea doped DSHP .......................................................... 215
Figure 5.7: (a) DSC Thermogram of 2 mole% Thiourea doped DSHP .......................................................... 217
Figure 5.7: (a) DSC Thermogram of 6 mole% Thiourea doped DSHP .......................................................... 218
Figure 7.1: Solubility curve of L-Tartaric acid, Pure DSHP and 5 mole%
L-Tartaric acid doped DSHP and 50 mole% L-Tartaric acid mixed
DSHP ........................................................................................................ 229
Figure 7.2: The Photographs of the single bulk a) Pure L-Tartaric acid ,
(b) Pure DSHP and (c) L-Tartaric acid 5mole% doped and 50 mole% mixed DSHP
cotton silk filament nature ........................................................................... 232
Figure 7.3: (a) The Powder XRD Pattern of Pure L-Tartaric acid &
(b) 5 mole% L-Tartaric acid doped DSHP ........................................ 237
Figure 7.3: (c) The Powder XRD Pattern of 50 mole% L-Tartaric acid mixed
DSHP ................................................................................................. 238
Figure 7.4: (a) FTIR Spectrum of Pure L-Tartaric acid .......... 241
Figure 7.4: (b) FTIR Spectrum of 5 mole% L-Tartaric acid doped
DSHP .................................................................................................... 242
Figure 7.4: (c) FTIR Spectrum of 50 mole% Glycine mixed DSHP .......... 243
Figure 7.5: UV-Spectrum of L-Tartaric acid doped and mixed DSHP ...... 246
Figure 7.6: (a) TGA Thermogram of Pure L-Tartaric acid .............. 248
Figure 7.6: (b) DSC Thermogram of Pure L-Tartaric acid ... 249
Figure 7.7: (a) TGA Thermogram of 5 mole% L-Tartaric acid doped
DSHP .................................................................................................... 250
Figure 7.7: (b) TGA Thermogram of 50 mole% L-Tartaric acid mixed with
DSHP .................................................................................................... 251
Figure 7.7: (c) DSC Thermogram of 50 mole% L-Tartaric acid mixed with
DSHP .................................................................................................... 252
