# CONTENTS

1. **INTRODUCTION**
   
   1.1 Introduction .......................... 1
   1.2 Classification of corrosion process ............ 3
   1.3 Corrosion mechanism ...................... 4
   1.4 Classifications of the atmospheric environment ..... 16
   1.5 Conditions for atmospheric corrosion .......... 17
   1.6 Composition of surface electrolyte .......... 22
   1.7 Corrosion - period of exposure ............. 29
   1.8 Composition of corrosion products .......... 30
   1.9 Objectives of the present study ............. 34

2. **LITERATURE REVIEW**
   
   2.1 Introduction .......................... 36
   2.2 Technical publications .................... 36
   2.3 Degradation of materials ................... 37
   2.4 Atmospheric factors ...................... 37
   2.5 Work done : World Wide ..................... 45
   2.6 Materials of corrosion ...................... 50
   2.7 Evaluation of protective schemes .......... 52
   2.8 Corrosion map ................................ 53

3. **MATERIALS AND METHODS**
   
   3.1 Introduction .......................... 57
   3.2 Places of study .......................... 57
   3.3 Period of study ........................... 61
   3.4 Selected materials ........................ 63
   3.5 Procedures for field study ................. 66
3.6 Analysis of corroded product
  3.6.1 Mass loss method
  3.6.2 FTIR - spectrometer
  3.6.3 SEM analysis
3.7 Atmospheric parameters
  3.7.1 Instrumentation
  3.7.1.a. Spectrophotometer
  3.7.2 Air sampler
  3.7.3 Modified Jacobs and Hochheiser sodium arsenite method for analysis of NO₂
  3.7.4 Pararosaniline method for determination of Sulphur dioxide (SO₂)
  3.7.5 Wet Candle method (Chloride)
3.8 Meteorological data
3.9 Statistical method
3.10 Anti-Corrosive method – coating systems
  3.10.1 Non metallic coatings
  3.10.2 Inorganic coatings
  3.10.3 Organic coatings
4. RESULTS AND DISCUSSIONS
4.1 Introduction
4.2 Atmospheric corrosion behavior of metals/alloy in different environments for various periods.
  4.2.1 Mild steel
  4.2.2 Copper
  4.2.3 Aluminium
  4.2.4 Atmosphere corrosive categories
  4.2.5 Durability factor
4.2.6 Concluding remarks 141

4.3 Seasonal variations in rates of corrosion of selected metals/alloy 143
4.3.1 Ranipet 143
4.3.2 Cuddalore 148
4.3.3 Tranquebar 152
4.3.4 Mayiladuthurai 156
4.3.5 Concluding remarks 160

4.4 FTIR Analysis 161
4.4.1 FTIR Analysis of corroded products of Mild steel – Ranipet. 162
4.4.2 Cuddalore 167
4.4.3 Tranquebar 170
4.4.4 Mayiladuthurai 174
4.4.5 Concluding remarks 179
4.4.6 FTIR Analysis of corroded products of Copper – Ranipet 180
4.4.7 Cuddalore 184
4.4.8 Tranquebar 188
4.4.9 Mayiladuthurai 192
4.4.10 Concluding remarks 196
4.4.11 FTIR Analysis of corroded product of aluminium – Ranipet 197
4.4.12 Cuddalore 200
4.4.13 Tranquebar 203
4.4.14 Mayiladuthurai 207
4.4.15 Concluding remarks 210

4.5 Multiple regression analysis 210
4.5.1 Location I (Ranipet) 212
4.5.2 Location II (Cuddalore) 215
4.5.3 Location III (Tranquebar) 218
4.5.4 Location IV (Mayiladuthurai) 220
4.5.5 Concluding remarks 222

4.6 SEM ANALYSIS (Scanning Electron Microscope) 223
4.7 Anti – Corrosive methods – protective coatings 227

5. CONCLUSION 231
