LIST OF TABLES

3.1 Phases of the study
3.2 F-Value of S.E.S Test
3.3 F-Value of Intelligence test scores
3.4 Independent, Dependent and Control variables.
3.5 Blue print of items
3.6 Difficulty Value of items of second draft of achievement test
3.7 Discriminating power of items of the second draft of achievement test
3.8 Test-Retest Reliability of the Self-Concept
3.9 Programme of Pre-testing
3.10 Syntax of the Inquiry training model
3.11 Programme of Post-testing
4.0 F-max Values for Achievement, Self-Concept and Creativity
4.1.1 ANOVA for pre-test scores of achievement between experimental groups and control group
4.1.2 ANOVA for post-test scores of achievement between experimental groups and control group
4.1.3 't' Values for difference in the Post-test mean scores of achievement of experimental groups and control group
4.1.4 ANOVA for post-test gain scores of achievement between experimental groups and control group

4.1.5 't' Values for difference in the Post-test mean gain scores of achievement of experimental groups and control group

4.2.1 ANOVA for pre-test scores of Self-Concept between experimental groups and control group

4.2.2 ANOVA for post-test scores of Self-Concept between experimental groups and control group

4.2.3 't' Values for difference in the Post-test mean scores of Self-Concept of experimental groups and control group.

4.2.4 ANOVA for post-test gain scores of Self-Concept between experimental groups and control group

4.2.5 't' Values for difference in the Post-test mean gain scores of Self-Concept of experimental groups and control group

4.3.1 ANOVA for pre-test scores of Creativity between experimental groups and control group

4.3.2 ANOVA for post-test scores of Creativity between experimental groups and control group

4.3.3 't' Values for difference in the Post-test mean scores of Creativity of experimental groups and control group
4.3.4 ANOVA for post-test gain scores of Creativity between experimental groups and control group

4.3.5 't' Values for difference in the Post-test mean gain scores of Creativity of experimental groups and control group

4.4.1.1 ANOVA for pre-test scores of Fluency between experimental groups and control group

4.4.1.2 ANOVA for post-test scores of Fluency between experimental groups and control group

4.4.1.3 't' Values for difference in the Post-test mean scores of Fluency of experimental groups and control group

4.4.1.4 ANOVA for post-test gain scores of Fluency between experimental groups and control group

4.4.1.5 't' Values for difference in the Post-test mean gain scores of Fluency of experimental groups and control group

4.4.2.1 ANOVA for pre-test scores of Flexibility between experimental groups and control group

4.4.2.2 ANOVA for post-test scores of Flexibility between experimental groups and control group

4.4.2.3 't' Values for difference in the Post-test mean scores of Flexibility of experimental groups and control group
4.4.2.4 ANOVA for post-test gain scores of Flexibility between experimental groups and control group

4.4.2.5 't' Values for difference in the Post-test mean gain scores of Flexibility of experimental groups and control group

4.4.3.1 ANOVA for pre-test scores of Originality between experimental groups and control group

4.4.3.2 ANOVA for post-test scores of Originality between experimental groups and control group

4.4.3.3 't' Values for difference in the Post-test mean scores of Originality of experimental groups and control group

4.4.3.4 ANOVA for post-test gain scores of Originality between experimental groups and control group

4.4.3.5 't' Values for difference in the Post-test mean gain scores of Originality of experimental groups and control group
