ACKNOWLEDGEMENTS

I take this opportunity to acknowledge people who were directly or indirectly part of my accomplishment in completing Ph.D. degree. Foremost, my thesis advisor Prof. Ramesh Anishetty commends mention. He has introduced and motivated the research concerning liquid water and hydrophobic force. This would eventually form the dissertation topic. I sincerely acknowledge his interest and patience towards resolving my doubts and putting up with my intermittent stupidities during discussions. I would also like to acknowledge discussions and conversations with other faculty members, particularly, Dr. Vani, Dr. Baskaran, and Dr. Gautam Menon at The Institute of Mathematical Sciences (IMSc), who catalysed my research at important junctures. My sincere thanks to Dr. Vani for introducing me to numerical simulation techniques which I wish to utilize frequently in future. The set of schools and conferences attended during the tenure and the interactions with eminent scientists provided necessary sparks of encouragement. I acknowledge the financial support received in this regard from various sources other than IMSc, namely, Jawaharlal Nehru Center for Advanced Scientific Research (India), International Center for Theoretical Physics (Italy), Department of Science and Technology (India), and Gordon Research Conferences (U.S.A.).

I am also fortunate to have an understanding set of family members who, although are strangers to scientific research, stood by me especially during tough days at work. My sincere regards to my mother Mrs. Durga, who not only provides constant emotional and moral support, but is also an epitome of perseverance and a source of inspiration all through my life. Although my wife Surekha joined us only recently, her unswerving love and compatible nature has contributed positively towards my accomplishment.

My office-mates Raghavendra Rao, Gaurav Chakravarthy and N. R. Aravind also require a special mention. We shared a enviable rapport all through and created a conducive work atmosphere for ourselves. Vinu Lukose and Jayalal Sharma, my senior colleagues, have been like elder brothers. Thanks is also due to efficient technical and administrative staff of IMSc whose constant endeavors toward betterment of amenities in the institute and easing procedures desire special appreciation.
