List of Figures:

Chapter 1

Figure 1.1 Class I type associate electron carrier domains of bacterial or mitochondrial P450.

Figure 1.2 Class II type associate electron carrier domains of P450 3A4 (microsomal) P450 BM3.

Figure 1.3 Spectral characteristics of CYP102A1 (CYPBM3).

Figure 1.4 Distribution of CYPs in human body.

Figure 1.5 Metabolic contribution of various P450s.

Figure 1.6 Tertiary structure of CYP450BM3.

Figure 1.7 Active site structure of P450BM3.

Figure 1.8 A model for catalytic cycle of P450BM3 monooxygenase showing the process of substrate metabolism.

Figure 1.9 Mechanisms of metabolic transformations of different substrates to its water soluble form by CYP450.

Figure 1.10 Phylogenetic tree of the CYP450BM3 monooxygenase domains.

Chapter 2

Figure 2.1 Quantitative arrangement of different type of amino acids in descending order, found in CYPBM3 and CYP3A4, respectively.

Figure 2.2 Amino-acid sequence alignment of CYP4503A4 and CYP450BM3.

Chapter 3

Figure 3.1 Effect of various carbon sources on biomass production. The values are the means ± standard deviations of six measurements.

Figure 3.2 Effect of various nitrogen sources on biomass production. The values are the means ± standard deviations of six measurements.

Figure 3.3 Effect of different pH levels on biomass production. The values are the means ± standard deviations of six measurements.
Figure 3.4 Effect of different temperature on biomass production. The values are the means ± standard deviations of six measurements.

Figure 3.5 Growth curve of wild and mutant of *B. megaterium*. The values are the means ± standard deviations of six measurements.

Figure 3.6 P450BM3 Enzyme activity in mutants isolated from NTG mutagenesis. The values are the means ± standard deviations of six measurements.

Figure 3.7 P450BM3 Enzyme activity in mutants isolated from UV mutagenesis. The values are the means ± standard deviations of six measurements.

Figure 3.8 P450BM3 Enzyme activity in mutants isolated from NTG+UV in combination. The values are the means ± standard deviations of six measurements.

Figure 3.9 P450BM3 Enzyme activity in mutants isolated from EtBr mutagenesis. The values are the means ± standard deviations of six measurements.

Figure 3.10 P450BM3 Enzyme activity in mutants isolated from EMS mutagenesis. The values are the means ± standard deviations of six measurements.

Figure 3.11 P450BM3 Enzyme activity in mutants isolated from Ethionine mutagenesis. The values are the means ± standard deviations of six measurements.

**Chapter 4**

Figure 4.1 Colony morphology of different mutants of *Bacillus megaterium* resistant to variety of chemical mutagens and UV radiation.

Figure 4.2 (a-g) Image analysis SEM of *B. megaterium* and its mutant having highest CYP450 enzyme activity obtained by treatment of UV and NTG in combination.

Figure 4.3a TEM of wild type of strain of *B. megaterium*.

Figure 4.3b TEM of UV treated cells of *B. megaterium*.

Figure 4.3c TEM of Ethionine treated cells of *B. megaterium*.

Figure 4.3d TEM of Ethidium bromide treated cell of *B. megaterium*.

Figure 4.3e TEM of Ethyl Methane Sulphonate (EMS) treated cells of *B. megaterium*.

Figure 4.3f TEM of NTG treated cells of *B. megaterium*.

Figure 4.3g TEM of NTG+UV treated cells of *B. megaterium* (ACBT-U5).
Chapter 5

Figure 5.1 Normal Plot of the Standardized Effects of components on CYP450BM3 enzyme activity.

Figure 5.2a Surface plot of P450BM3 activity VS glycerol and magnesium sulphate.
Figure 5.2b Surface plot of P450BM3 activity VS glycerol and magnesium sulphate.
Figure 5.2c Surface plot of P450BM3 activity VS glycerol and magnesium sulphate.
Figure 5.2d Surface plot of P450BM3 activity VS yeast extract and glycerol.
Figure 5.2e Surface plot of P450BM3 activity VS yeast extract and glycerol.
Figure 5.2f Surface plot of P450BM3 activity VS yeast extract and magnesium sulphate.
Figure 5.2g Surface plot of P450BM3 activity VS yeast extract and magnesium sulphate.
Figure 5.2h Surface plot of P450BM3 activity VS yeast extract and magnesium sulphate.

Chapter 6

Figure 6.1 Effect of aeration rate on CYP450BM3 production and enzyme activity.
Figure 6.2 Effect of agitation rate on biomass and CYP450BM3 production.
Figure 6.3 Scale-up of P450BM3 enzyme activity in 5-l-batch fermenter.
Figure 6.4 Scale-up of P450BM3 enzyme activity in 5-l-fed-batch fermenter.

Chapter 7

Figure 7.1 Effect of filter aid on the specific resistance to filtration broth of B. megaterium ACBT-U5.
Figure 7.2 The effect of pH on the rate of filtration of broth of B. megaterium ACBT-U5.
Figure 7.3 Schematic representation of downstream process for CYP450BM3.
Figure 7.4 Purification of CYP450BM3 by column chromatography.
Figure 7.5 SDS-PAGE of purified protein.
Figure 7.6 Line diagram of Purification and Crystallization.
