LIST AND DETAILS OF FIGURES

**Fig. 1:** National trends in area, production and yield of pulses.

**Fig. 2:** National trends in area, production and yield of chickpea.

**Fig. 3:** Effects of mutagenic treatments on seed germination (%), germination inhibition (%), seedling length (cm) and seedling injury (%) in chickpea var. Pusa-256 in M₁ generation (in laboratory).

**Fig. 4:** Effects of mutagenic treatments on seed germination (%), germination inhibition (%), seedling length (cm) and seedling injury (%) in chickpea var. BG-1053 in M₁ generation (in laboratory).

**Fig. 5:** Effects of mutagenic treatments on seed germination (%), germination inhibition (%), plant survival (%), pollen fertility (%) and pollen fertility reduction (%) in chickpea var. Pusa-256 in M₁ generation (in field).

**Fig. 6:** Effects of mutagenic treatments on seed germination (%), germination inhibition (%), plant survival (%), pollen fertility (%) and pollen fertility reduction (%) in chickpea var. BG-1053 in M₁ generation (in field).

**Fig. 7:** Effects of mutagenic treatments on nitrate reductase activity (NRA), chlorophyll and carotenoid contents in the leaves of chickpea var. Pusa-256 in M₁ generation (in laboratory).

**Fig. 8:** Effects of mutagenic treatments on nitrate reductase activity (NRA), chlorophyll and carotenoid contents in the leaves of chickpea var. BG-1053 in M₁ generation (in laboratory).

**Fig. 9:** Number of abnormal meiotic cells (pooled) at different stages of meiosis induced by mutagenic treatments in chickpea var. Pusa-256 in M₁ generation.
Fig. 10: Number of abnormal meiotic cells (pooled) at different stages of meiosis induced by mutagenic treatments in chickpea var. BG-1053 in M$_1$ generation.

Fig. 11: Total (pooled) frequency (%) of meiotic abnormalities induced by gamma rays, EMS and their combinations at different stages of meiotic division in M$_1$ generation of chickpea (varieties pooled over mutagens).

Fig. 12: Total (pooled) frequency (%) of meiotic abnormalities induced by gamma rays, EMS and their combinations at different stages of meiotic division in M$_1$ generation of chickpea (mutagen pooled over varieties).

Fig. 13: Effects of mutagenic treatments on seed germination (%), germination inhibition (%), pollen fertility (%) and pollen fertility reduction (%) in chickpea var. Pusa-256 in M$_2$ generation.

Fig. 14: Effects of mutagenic treatments on seed germination (%), germination inhibition (%), pollen fertility (%) and pollen fertility reduction (%) in chickpea var. BG-1053 in M$_2$ generation.

Fig. 15: Comparative frequency (%) and spectrum of chlorophyll mutations in chickpea based on pooled values of two varieties of chickpea (Pusa-256 and BG-1053).

Fig. 16: Mutational rate of the mutagens in relation to biological damage in two varieties of chickpea.

Fig. 17: Total (pooled) frequency and spectrum of morphological mutants induced in M$_2$ generation of chickpea.
