BIBLIOGRAPHY

Abel, F.L. and Wolf, M.B. (1973):
Increased capillary permeability of 125I-labeled albumin during experimental hemorrhagic shock.

Ackerman, N.B., Brinkley, F.E. (1968):
Comparison of effects of tissue oxygenation of hydrogen, oxygen and intravascular hydrogen peroxide.

Effect of naloxone in hemorrhagic shock.

Vascular smooth muscle and general anaesthetics.

Pathophysiology of shock.

Myocardial oxygen delivery after experimental hemorrhagic shock.

Pathophysiology of experimental lactic acidosis in dogs.

Characterization of noradrenergic control of vasopressin release by the organ-cultured rat hypothalamohypophyseal system.
Endocrinology, 111: 279-279.

Ballinger, W. F., Vollen Weider, H., Pierucci, L., 
Templeton, J. R., J. Y. (1962): 
The accumulation and removal of excess 
lactate in arterial blood during 
hypothermia and biventricular bypass. 
Surgery, 57: 738.

Baue, A. E., Wirth, M. A., Chaudhry, J. H. and 
Sayeed, M. M. (1973): 
Impairment of cell membrane transport 
during shock and after treatment. 

Baue, A. F., Chaudry, I. H., Wurth, M. A. and 
Cellular alterations with shock and 
ischemia. 
Angiology, 25: 31-41.

Baue, A. E. (1975): 
Multiple, progressive of sequential 
systems failure. 

Serum myocardial depressant factor 
of burn shock. 

Beaty, C. H. (1945): 
The effect of hemorrhage on the lactate/ 
pyruvate ratio and arterial differences 
in glucose and lactate. 

Becuwkes, R. III (1971): 
Efferent vascular patterns and the 
early vascular tubular relations in the 
dog kidney. 

Beregovich, J., Bianchi, C., Rubler, E., Lomnitz, 
Dose related hemodynamic and renal 
effects of dopamine in congestive heart 
Berne, R.M. (1964):  
Regulation of coronary blood flow.  

Advances in experimental medicine and  
biology, vol. 9. Shock. Biochemical,  
Pharmacological and Clinical aspects  
(proceedings of the International  
Symposium on shock held at Como, Italy.  

Effect of pharmacologic coronary flow  
augmentation on cardiac function in  
hypotension.  

Renin release after hemorrhage and  
after suprarenal aortic constriction  
in dogs without sodium delivery to  
the macula densa.  

Bohlen, H.G., Hutchins, P.M., Rapela, C.E. and  
Green, H.D. (1975):  
Microvascular control in the intestinal  
mucosa of normal and hemorrhaged  
rats.  

Peripheral circulation. In Handbook  
of Shock and Trauma, vol. I. Basic  
Science. edited by B.M. Altura  

Bond, R.F., Manley, E.S., and Green, H.D. (1967):  
Cutaneous and skeletal muscle  
vascular resistance to hemorrhage and  
irreversible shock.  

Bond, R.F., Manning, E.S., Gonzalez, N.M.,  
Myocardial and skeletal muscle responses  
to hemorrhage and shock during  
adrenergic blockade.  
Bond, R., Zepp, A., Peissner, L. and Manning, E. (1979):
Correlation between skeletal muscle free fatty acid extraction and vascular decompensation during hemorrhagic hypotension.
Lipids, 14: 842-847.

Bond, R., Peissner, L. and Manning, E. (1980):
Evidence against a reflex vasodilatation in hemorrhagic hypotension.
Experientia, 36: 80-81.

Renal changes in shock treated with levaternol.

Predictive value of serum osmolality in shock following major trauma.

Myocardial depressant factor in plasma from cats in irreversible post-oligemic shock.

Excess lactate an index of shock in human patients.
Science, 143: 1457-1459.

Assay of renin in single glomeruli.
Lancet, 2: 663-669.

The effect of acute hemorrhage in the dog and man on plasma renin concentration.
J. Physiol (Lond) 182: 649-663.

Burnie, J. (1981):
Naloxone in shock.
Lancet, 1: 942.
Cannon, W.B. (1923):  

Cannon, W.B. and Bayliss, W.M. (1919):  
Notes on muscle injury in relation to shock, Special reports, Medical Research Commission, No. 26, VIII, 19.

Carrier, S., Thorburn, G.D., Morchoe, C.C.O. and Barger, A.C. (1966):  

Chien, S. (1967):  

Clausen, G. and Tyssebohn (1974):  
Clinical disorders of fluid and electrolyte metabolism. New York,

Physiological effects of high dose naloxone administration in normal adults.

High dose naloxone infusion in normals.
Dose-dependent behavioral, hormonal and physiological response.

Lactate metabolism.
Anaesthesia, 45: 661-673.

Renal hemodynamics in acute renal failure.

Cook, W. F. (1962):
Renin and the juxta glomerular apparatus.

Corcoran, A. C. and Page, I. H. (1943):
Effect of hypotension due to hemorrhage and of blood transfusion on renal function in dogs.

Cordey, E., Williams, J. H. Jr (1960):
Effect of shock and vasopressor drugs on the regional circulation of the brain, heart, kidney and liver.

Studies of circulation in clinical shock.

The anatomic and metabolic source of lactate in shock.

Intracellular sodium and potassium in vascular smooth muscle during hemorrhagic shock.

Deloyer,:
As quoted by Balinger, W.F. (1963):
General introduction in shock; In Shock, J., Suten, T., Bandila, A., Cafrita, A., Bucur and V. Candea (Eds) pp. I

Naloxone in shock.

Enkephalin modulate the responsiveness of rat atria in vitro to nor-epinephrine peptides, 3: 475-478.

Structure and biosynthesis of pro-adrenal corticotropin/endorphin and related peptides.

Science, 205: 317-318.

Naloxone treatment of endotoxin shock: Stereospecificity of physiologic and pharmacologic effects in the rat.
Opiate antagonist improves neurologic recovery after spinal injury.

Dopamine partially mediates the cardiovascular effects of naloxone after spinal injury.

Endorphins in experimental spinal injury, therapeutic effect of naloxone.

Opiate antagonist and thyrotropin-releasing hormone (1) potential role in the treatment of shock.
NADA, 252: 1177-1180.

Opiate antagonists and thyrotropin-releasing hormone. III. Potential role in the treatment of central nervous system injury.
JAMA., 252: 1452-1454.

Feuerstein, G., Chinek, C.C. and Lopin, I.J. (1981):
Effect of naloxone on the cardiovascular and sympathetic response to hypovolemic hypotension in the rat.

Intra renal distribution of blood flow in diabetes insipidus.
Role of ADH.

A circulating depressant effect following canine hemorrhagic shock.

Glenn, T.M. and Lefer, A.M. (1971a):  
Significance of splanchnic proteases in the production of a toxic factor in hemorrhagic shock.  

Effects of a myocardial depressant factor on isolated vascular smooth muscle.  

Goldberg, L.I. (1972):  
Cardiovascular and renal actions of dopamine: Potential clinical applications.  

Dopamine-clinical uses of an endogenous catecholamine.  

Dopamine receptors: Application in clinical cardiology.  

Functional cardiac deterioration during development of hemorrhagic circulatory deficiency.  

Sympathetic nerve and skeletal muscle vascular responses to hemorrhage and shock with and without cholinergic and beta adrenergic blockade in dog.  

Left coronary hemodynamics during hemorrhagic hypotension and shock.  

Ciba Foundation Symposium on shock.

Science, 197: 1367-1369.

Gurll, N.J., Reynolds, D.G., Vargish, T.,
Gurll, N.J. (1985):  
Endorphins in endotoxin shock. In  
Hinshaw, L.B. (Ed) Handbook of Endotoxin,  
vol. 2, Pathophysiology of endotoxin,  
Elsevier Science Publishers, Amsterdam,  
pp. 299-337.

Central nervous system is involved in  
the cardiovascular responses to naloxone  
in canine endotoxic but not hemorrhagic  
shock.  

Effects of hemorrhagic shock on the  
heart and circulation of intact dogs.  
Circulation, 11: 623-635.

Effects of hemorrhagic shock and  
treatment with hypothermia on the  
potassium content and transport of single  
mammalian skeletal muscle cells.  

Anatomy of the interstitial tissue.  

Hardway, R.M., W.H. Brune, E.P., Greever, J.W.,  
Burns, and H.P. Mock (1962):  
Studies on the role of intravascular  
coagulation in irreversible  
hemorrhagic shock.  

Influence of vasoconstrictors and  
vasodilators on disseminated intra- 
vascular coagulation in irreversible  
hemorrhagic shock.  
Surg. Gynecol. Obstet., 119:  
1053-1056.
