ACKNOWLEDGEMENT

With a deep sense of gratitude and honour, I take this opportunity to acknowledge the guidance by Professor Mrs. B.K. Maini, former Head of the Department of Physiology, Medical College, Rohtak and presently Executive Director, National Board of Examinations, New Delhi, without whose helpful advice and constructive criticism, this study would have remained incomplete.

It has been my privilege and honour to have worked under Dr. R.K. Marya, Associate Professor and Head of the Department of Physiology, Medical College, Rohtak, who introduced me to the scientific field and whose excellent scientific sense, keen interest, pertinent criticism and valuable suggestions, enabled the study to see the light of the day.

I am indebted to my husband, Dr. V. Raghunandan, Lecturer, Department of Physiology, Medical College, Rohtak, for his constant encouragement and criticism rendered to me at each and every stage of this work, without which the task would have become immeasurably difficult.

I am also thankful to Dr. G.P. Singh and Dr. B.S. Gupta, Department of Biochemistry, for their kind co-operation and technical guidance in the biochemical estimations.

My special thanks are due to Mr. Virender Dua and Mr. Randhir for their help in carrying out the experimental work. I am also thankful to Mr. Walia and Mr. Sunder Lal, Department of Anatomy, for the help they rendered to me in the histopathological studies.

I am also indebted to my daughter Miss Reshmi Menon, for helping me in whatever little way possible to complete this work.

I must thank Mr. P.N. Jain who accepted the burden of typing this work in time.

I owe my gratitude to each and every member of the Physiology Department, for their kind co-operation.

Lastly, but not the least I acknowledge the contribution of all those dogs who sacrificed their lives for the completion of this work.

(Rajalakshmi)

(K.L. RAJALAKSHMI)
