

List of Figures

| | | |
|-------------|---|----|
| Figure 1.1 | Data Mining Architecture | 4 |
| Figure 1.2 | Architecture of Big Data | 7 |
| Figure 1.3 | Cloud Computing Architecture | 10 |
| Figure 1.4 | Private key encryption for two party | 13 |
| Figure 1.5 | Private key encryption for one party | 13 |
| Figure 1.6 | Public key encryption | 15 |
| Figure 2.1 | Area of Relevance and Contribution diagram (ARC diagram) | 23 |
| Figure 2.2 | Ideal Model of SMC | 40 |
| Figure 2.3 | Real Model of SMC | 41 |
| Figure 3.1 | Model for Collaborative Computation Environment | 54 |
| Figure 3.2 | Research Methodology | 58 |
| Figure 4.1 | Architecture of Joint Computation with Pseudo-Randomization and Anonymization | 71 |
| Figure 4.2 | Packet transfer in <i>JCRA</i> by increasing parties | 75 |
| Figure 4.3 | <i>JCRA</i> data security metric for varying packets | 76 |
| Figure 4.4 | <i>JCRA</i> security metric for varying anonymizers | 77 |
| Figure 4.5 | <i>JCRA</i> metric in case of malicious conduct by Anonymizers | 79 |
| Figure 4.6 | <i>JCRA</i> metric for collision between parties and anonymizers | 81 |
| Figure 4.7 | <i>JCRA</i> metric for collision between TTP and anonymizers | 82 |
| Figure 4.8 | Architecture of <i>DRSS</i> | 86 |
| Figure 4.9 | Packet transfer in <i>DRSS</i> by increasing parties | 90 |
| Figure 4.10 | <i>DRSS</i> data security metric for varying packets | 91 |
| Figure 4.11 | <i>DRSS</i> security metric for varying anonymizers | 92 |

| | | |
|-------------|--|-----|
| Figure 4.12 | Probability of breaking Protocol in case of Malicious Anonymizers | 93 |
| Figure 4.13 | Probability of breaking protocol by varying pseudo-random number and malicious anonymizers | 95 |
| Figure 5.1 | Secure Multi-Party Computation Framework | 102 |
| Figure 5.2 | Architecture of <i>JCAE</i> Protocol | 104 |
| Figure 5.3 | Probability of Joint Malicious Conduct by TTP and Anonymizers | 108 |
| Figure 5.4 | Probability of Joint Malicious conduct by parties and anonymizers | 110 |
| Figure 6.1 | Screen shot of <i>JCRA</i> execution for increasing anonymizers | 124 |
| Figure 6.2 | Screen shot of <i>JCRA</i> execution for same number of parties, packets and anonymizers | 125 |
| Figure 6.3 | Screen Shot of registration with TTP, protocol parameters are generated | 127 |
| Figure 6.4 | Screen shot of get the computation Result function | 128 |
| Figure 6.5 | Screen shot of Party trying to get result without inserting packets after registration | 129 |
| Figure 6.6 | Computation load of <i>JCRA</i> by increasing parties | 130 |
| Figure 6.7 | Computation load of <i>DRSS</i> by increasing parties | 131 |
| Figure 6.8 | Computation load of <i>JCAE</i> by increasing number of parties | 132 |
| Figure 6.9 | Test results of <i>JCRA</i> by increasing number of parties | 134 |
| Figure 6.10 | Test results of <i>JCRA</i> by increasing number of packets | 135 |
| Figure 6.11 | Test results of <i>JCRA</i> by increasing number of anonymizers | 136 |
| Figure 6.12 | Test results of <i>DRSS</i> by increasing parties | 138 |

| | | |
|-------------|---|-----|
| Figure 6.13 | Test results of <i>DRSS</i> by increasing packets and parties | 139 |
| Figure 6.14 | Test results of <i>DRSS</i> by increasing Anonymizers | 140 |
| Figure 6.15 | Test results of <i>JCAE</i> by increasing number of parties | 141 |
| Figure 6.16 | Test results of <i>JCAE</i> by increasing number of packets | 142 |
| Figure 6.17 | Test results of <i>JCAE</i> by increasing number of anonymizers | 143 |

List of Algorithms

| | | |
|-----------------|-----------------------|-----|
| Algorithm 4.4.5 | <i>JCRA</i> Algorithm | 83 |
| Algorithm 4.5.5 | <i>DRSS</i> Algorithm | 94 |
| Algorithm 5.4 | <i>JCAE</i> Algorithm | 109 |
