ACKNOWLEDGEMENTS

I am grateful to many people for their contributions during this Research-work and to the quality of my life while I worked on it.

Firstly, it has been an honour to work with Prof. Shikhar Kumar Sarma, my advisor and guide. I am profoundly grateful to him for his perceptive, patient, and unselfish mentoring over the last 4 and half years. He has been an unfailing source of honest and supportive advice in my research and my career, and because of him, I have become much more competent and confident scholar and teacher.

Secondly, I would like to thank Prof. Anjana Kakoti, Head of the Department Computer Science for giving me a chance to carry out research work in the Department of Computer Science in Gauhati University, without this opportunity I would not be able to arrive at this phase.

Finally, I am grateful to all my friends and my entire family for the opportunities and support they provided me. My father, Sjt. Tridiv Ranjan Das, has always been my early childhood mentor and he has always encouraged me in all my constructive work I did whatsoever, including this research work. My late grandfather, Chandra Kanta Das also was my inspiration for extending my higher education, though I could not get much from
my grandfather as he expired at my very early age, but his fond and love for higher education encouraged me to pursue higher education, I know he would be proud of where I am today.

ANUPAM DAS
"Scientific research is based on the idea that everything that takes place is determined by laws of nature, and therefore this holds for the action of people. For this reason, a research scientist will hardly be inclined to believe that events could be influenced by a prayer, i.e. by a wish addressed to a Supernatural Being."

- Albert Einstein
