Figure 3.7: HPTLC peak densitogram display of MEHR for flavonoids at 540 nm

Figure 3.8: HPTLC peak densitogram display of META for flavonoids at 366 nm

Figure 3.9: HPTLC peak densitogram display of META for flavonoids at 540 nm

Figure 3.10: Chromatograms of MEHR (Track 1-3) and META (Track 4-6), under 366nm after derivatization with anisaldehyde sulphuric acid reagent.

Figure 3.11: Chromatograms of MEHR (Track 1-3) and META (Track 4-6), under 540nm after derivatization with anisaldehyde sulphuric acid reagent.

Figure 3.12: HPTLC peak densitogram display of MEHR for sterols at 366 nm

Figure 3.13: HPTLC peak densitogram display of MEHR for sterols at 540 nm

Figure 3.14: HPTLC peak densitogram display of META for sterols at 366 nm

Figure 3.15: HPTLC peak densitogram display of META for sterols at 366 nm

Figure 3.16: Chromatograms of MEHR (Track 1-3) and META (Track 4-6) for saponins, under 366nm after derivatization with anisaldehyde sulphuric acid reagent.

Figure 3.17: Chromatograms of MEHR (Track 1-3) and META (Track 4-6) for sterols, under 540nm after derivatization with anisaldehyde sulphuric acid reagent.

Figure 3.18: HPTLC peak densitogram display of META for saponins at 366 nm

Figure 3.19: HPTLC peak densitogram display of MEHR for saponins at 540 nm

Figure 3.20: HPTLC peak densitogram display of META for saponins at 366 nm

Figure 3.21: HPTLC peak densitogram display of META for
saponins at 540 nm

**Figure 3.22:** Chromatograms of MEHR (Track 1-2), β-sitosterol (Track 3-9) and META (Track 10-11), under 366 nm after derivatization with anisaldehyde sulphuric acid reagent.

**Figure 3.23:** Chromatograms of MEHR (Track 1-2), β-sitosterol (Track 3-9) and META (Track 10-11), under 540 nm after derivatization with anisaldehyde sulphuric acid reagent.

**Figure 3.24:** HPTLC peak densitogram display of MEHR for quantification of β-sitosterol at 540 nm (Track 1 from figure 3.23)

**Figure 3.25:** HPTLC peak densitogram display of β sitosterol

**Figure 3.26:** HPTLC peak densitogram display of META for quantification of β sitosterol

**Figure 3.27:** Standard β-sitosterol calibration curve

**Figure 3.28:** Chromatograms of MEHR (Track 1-2), META (Track 3-4) and quercetin (Track 5-10), under 254 nm for quantification of quercetin.

**Figure 3.29:** Chromatograms of MEHR (Track 1-2), META (Track 3-4) and quercetin (Track 5-10), under 366 nm for quantification of quercetin.

**Figure 3.30:** HPTLC peak densitogram display of MEHR for quantification of quercetin at 270 nm (Track 1 from figure 3.28)

**Figure 3.31:** HPTLC peak densitogram display of META for quantification of quercetin at 270 nm (Track 3 from figure 3.28)

**Figure 3.32:** HPTLC peak densitogram display of quercetin at 270 nm

**Figure 3.33:** Standard quercetin calibration curve

**Figure 4.1:** Effect of MEHR and META on body weights of rats fed with HFD.

**Figure 4.2:** Effect of MEHR and META on body weights of rats fed with HFD.

**Figure 4.3:** Effect of MEHR and META on HDL(A), TC(B), LDL(C), VLDL(D) and TG(E) of rats fed with HFD.

**Figure 4.4:** Effect of MEHR and META on serum glucose(A),
AST(B) and ALT(C) levels of rats fed with HFD.

**Figure 4.5:** Effect of MEHR and META on abdominal circumference of rats fed with HFD.

**Figure 4.6:** Effect of MEHR and META on liver(A), kidney(B), peritoneal fat(C) and perirenal fat(D) of rats fed with HFD.

**Figure 4.7:** Effect of MEHR and META on fecal and liver fat content of rats fed with HFD.

**Figure 5.1:** *In vitro* inhibitory effect of MEHR on PL activity

**Figure 5.2:** *In vitro* inhibitory effect of META on PL activity

**Figure 5.3:** *In vitro* inhibitory effect of orlistat on PL activity

**Figure 5.4:** Michaelis-Menten kinetics plot for *in vitro* inhibitory activity of MEHR on PL at different substrate concentrations

**Figure 5.5:** Michaelis-Menten kinetics plot for *in vitro* inhibitory activity of META on PL at different substrate concentrations

**Figure 5.6:** Lineweaver–Burk plot for *in vitro* inhibitory activity of MEHR on PL at different substrate concentrations

**Figure 5.7:** Lineweaver–Burk plot for *in vitro* inhibitory activity of META on PL at different substrate concentrations

**Figure 5.8:** *In vitro* effect of MEHR on HMG CoA reductase activity

**Figure 5.9:** *In vitro* effect of META on HMG CoA reductase activity

**Figure 5.10:** *In vitro* effect of atorvastatin on HMG CoA reductase activity

**Figure 5.11:** *Ex vivo* inhibitory activity of MEHR, META and atorvastatin on HMG CoA reductase enzyme in high fat diet induced obese rats

**Figure 6.1:** Mean body weight changes of rats treated with META at dose levels of 0 (control), 250, 500 and 1000 mg/kg/day for 4 weeks

**Figure 6.2:** Mean body weight changes of rats treated with META at dose levels of 0 (control), 500 and 1000 mg/kg/day for 4 weeks and after recovery period of 2 weeks in satellite group
Figure 6.3: Food intakes in rats treated with META at dose levels of 0 (control), 250, 500 and 1000 mg/kg/day for 4 weeks

Figure 6.4: Food intakes of satellite group rats treated with META at dose levels of 0 (satellite control), 500 and 1000 mg/kg/day for 4 weeks and after recovery of 2 weeks

Figure 6.5: Water consumption in rats treated with META at dose levels of 0 (control), 250, 500 and 1000 mg/kg/day for 4 weeks

Figure 6.6: Water consumption of satellite group rats treated with META at dose levels of 0 (satellite control), 500 and 1000 mg/kg/day for 4 weeks and after recovery of 2 weeks

Figure 6.7: AST, ALT and ALP values of rats treated with META for 4 weeks in treatment groups and after recovery of 2 weeks in satellite groups

Figure 6.9: Representative H and E images of the liver.

Figure 6.10: Representative H and E images of the kidney

Figure 6.11: Representative H and E images of the pancreas
