Acknowledgements

Praise be to God,
the Cherisher and Sustainer of the Worlds.

As I start writing the words of gratitude, the memories from the past flash on. It all started with a discussion with my guide, advisor and most of all a philosopher friend Dr. Ashok A. Ghatol who instilled in me the urge to research. It was his confidence in me that encouraged taking up this endeavor. I express my deep sense of gratitude towards him for his constant inspiration, timely guidance and several valuable advices. I find myself short of words to acknowledge his support during my entire research career.

My organization, the College of Engineering, Badnera is a wonderful place having wonderful people to work with. My sincere thanks to the management of the college for creating such an academically ambient environment. I thank all my teaching colleagues and non-teaching staff members for being so cooperative and caring.

I take this opportunity to thank Dr. V.T.Ingole, Principal, College of Engineering, Badnera for all kinds of support and motivation. Especially, I am grateful to the researching genius within him for several fruitful discussions to clarify my doubts and queries.

I am thankful to all my fellow colleagues at the Department of Computer Science & Engineering who provided me the moral and technical support during my research work. Specifically, I would like to thank Prof. J.S.Deshpande, the Head of the department for his understanding, support and several fruitful (and prolonged too!) discussions; especially the discussions on automata that led me to the design of tutor model.
I am grateful to the librarian and all the library staff at the College of Engineering, Badnera for their support and ever readiness to satisfy my information appetite.

My students have always been a source of energy and inspiration for me. I thank all my under-graduate, graduate and research students for keeping me ‘young’. I would like to thank my research students Nitin Koli, Sajid Khan, Mohammed Atique and Chandrashekhar Dhote for their support and help during the preparation of this thesis. I am thankful to my post-graduate student Dinesh Harkut for his help and software support.

On the family front, my thanks are due to my parents and my brothers for their love, affection, care and support; especially, to Manna for so much of timely help. I respectfully dedicate this work to my parents.

I owe a special thank to Sabiha, my better half who always stood by me and provided me emotional support to keep going. My affectionate thanks are due to Zeba and Azhar for their understanding to allow me snatching their play-time on our home computer and for their innocent patience during my long working hours.

Finally I would like to thank all the researchers in the field of information technology, education and intelligent systems from whose work I could get the direction. I gratefully acknowledge the authors of all the citations made in this thesis.

Mir Sadique Ali.
