

Tables

No.	Title	P.No.
2.1	The common global SME definition of IFC and the world Bank Group-SME	23
2.2	Definition of MSM Enterprises	24
3.1	SMEs Growth in India	76
3.2	Trend in Growth of Small Scale and Medium Industries in Tamilnadu	79
4.1	Frequency and percentage of the sexes by industry sector	86
4.2	Respondents and their families place of origin	87
4.3	Comparative age group of siblings	88
4.4	The business experience of respondents' family	89
4.5	Occupation of the parents	91
4.6	Education levels of respondents and their parents	93
4.7	Correlations between the Attributed and Attained Characteristics of entrepreneurs	94
4.8	Regression coefficients and probabilities between a set of Attributed Characteristics and the Attained Characteristic -“Highest Qualification”.	96
4.9	Group means for the effects of individual attributed characteristics on discriminating between those educated overseas and those educated within India	97
4.10	Pearson correlations for Need for Achievement scale items	102
4.11	Rotated Component Matrix	105
4.12	Initial unrotated principal components analysis statistics	106

4.13	Personal values: rotated (varimax) factor loadings for items with primary loadings on the first three components	108
4.14	Correlations between three personal values factors and need for achievement locus of Control.	110
4.15	Correlation between characteristics, need for achievement and locus of control	111
4.16	Correlations between attributed characteristics and the composite values variables V1, V2 and V3	112
4.17	Regression coefficients and probabilities between a modified set of Attributed Characteristics and V3: Affection	114
4.18	Correlations between attained characteristics and need for achievement and locus of Control	117
4.19	Correlations between attained characteristics and values V1, V2, and V3	118
4.20	Regression coefficients and probabilities of regression analyses between Attained Characteristics and V1: Responsibility	119
4.21	Regression coefficients and probabilities of regression analyses between Attained Characteristics and V3: Affection	120
4.22	Business legal structure by path to ownership	124
4.23	Initial PCA of Management Practices	126
4.24	Rotated (Varimax) component loadings for management practices items with primary loadings on four a priori extracted components	127
4.25	Comparison of the means for each Management Practices component by path to ownership	129
4.26	Linkages between n-Ach and Locus of Control with Management Practices variables.	130
4.27	The linkage between selected Personal Values and Management Practices variables	131

4.28	Regression table for MP1: Planning from a set of expectations and values	133
4.29	Regression table for MP3: Marketing from a set of expectations and values	136
4.30	The personal income when compared to one year ago.	139
4.31	Enterprise objectives by their importance to respondents, ranked by mean importance rating	140
4.32	Ranking of enterprise objectives by mean satisfaction rating of the respondents	141
4.33	Change in personal income as per path to ownership	142
4.34	Correlations between change in personal income, selected management practice variables	144
4.35	Mean ratings of satisfaction with the achievement of enterprise objectives as per path to ownership	145
4.36	Correlations between indicators of business performance and management practices.	147
4.37	Correlations between selected management practices variables and the business performance indicators' Mean Satisfaction	148
4.38	Regression coefficients and probabilities of overall mean satisfaction from performance and management practice predictors.	150
