List of Tables

**Table 3.1** Table showing the composition of various culture media used for isolation and perpetual maintenance of freshwater microalgae.

**Table 3.2** Computation of population growth rate \( (r) \), doublings per day \( (k) \), and doubling time \( (T_2) \) of microalgae isolates.

**Table 4.1** Fatty acids composition and total lipid content of seven microalgae isolates. The figures in parenthesis denote the carbon chain length and the number of double bonds present in the respective fatty acids.

**Table 4.2** Fatty acids composition and total lipid content of three microalgae isolates at two different growth stages. The figures in parenthesis denote the carbon chain length and number of double bonds.

**Table 5.1** Standardization of PCR reactions.

**Table 5.2** Annotation of amplified ITS2 rRNA gene region from the isolated microalgae.

**Table 5.3** The matrix table showing the compensatory base changes between the spine bearing species of *Desmodesmus*.

**Table 5.4** The matrix table showing the compensatory base changes between the small spineless species of *Desmodesmus*.

**Table 5.5** The matrix table showing the compensatory base changes between the species of *Scenedesmus*.

**Table 5.6** The matrix table showing the compensatory base changes in *Chlorella* and *Chlorella* like taxa.
