Research is an academic gift to one's life. It is an attempt to solve problems in a systematic effort, to push back the frontiers of human ignorance or to conform the validity of the solutions to problems others have presumably resolved. I have had one such frontier, namely, 'Health Economics', which is extraordinary and remarkable in all aspects. It brought me insights into several facets of human life. It made me reach out to many unreachable areas, that would not have been possible otherwise. Quite simply, I have attempted to combine two areas, Health and Economics, in this thesis because in practice also they are mixed. Both areas are mixed, and within each is a variety of drives, motives and systems. Because, without health, men earn little wealth and without wealth, men seldom attain full health.

This work would not have come to fruition but for the significant and valuable guidance, the rich contributions and suggestions, the ardent support and unflinching cooperation accorded to me by my guide Dr K. Rajaratnam, M.A., Ph.D. (London), Director, Centre for Research on New International Economic Order (CReNIEO), Madras 6. His guidance was a source of inspiration and direction in the choice of the problem and in the fulfilment of this academic exercise. His striving for perfection
and his stress for punctuality and promptness, enabled me to complete this work in time.

Research is an enduring experience in a Centre like CReNIEO where every one knows every other person. This provided me much scope for an integral part of an inter-disciplinary research like this. In this respect, Rev. Fr. Dr. M. Sebastin, S.J., M.A., Ph.D., was sincere in dealing with my problems adroitly. His involvement was real and very much rewarding. He laboured for many hours in helping me produce this thesis for which I will be grateful to him throughout my life. I record my sincere gratitude to Mrs. Premanjali Rao, Director for Finance and Administration, CReNIEO, for her innovative suggestions and meticulous planning in the execution of my work. I thank the Director-cum-Guide of the CReNIEO for infusing confidence and responsibility in me by throwing open for my use the administrative structure of the Centre that brought out a sense of commitment to research and pursuit of excellence.

I owe a deep debt of gratitude to Prof. D. Swamiraj, Principal, Bishop Heber College, Tiruchirapalli, for his spontaneous and committed help in the completion of this work. My sincere thanks are due to him for having kindly permitted me to do the research work and helped me in all possible ways and for his continued encouragement. I wish to acknowledge with thanks the valuable help of Dr S. Varadharajan, Head of
Agricultural Economics, Agricultural University and Research Institute, Madurai and Prof. D. Vijayan Kanagaraj, M.Sc., M.Phil., Faculty of Mathematics, Bishop Heber College, Tiruchirapalli for the empirical analysis of data. I express my sincere thanks to my dear colleagues in the Department, Prof. J. D. Jayachandran, Prof. M. D. Zian Paul and Prof. Mrs. Shanthi Hetsie Bai for their valuable assistance at several stages of my research work.

My sincere thanks are due to The Most Rt. Rev. Dr. J. Jayaseelan Jacob, B.D., M.Th. (USA), D.D., Bishop and the Venerable Church Council of the Tamil Evangelical Lutheran Church, Tiruchirapalli, who secured me a scholarship through the Lutheran World Federation to pay a visit to the USA, for consultations with experts in the field of Health Economics and collection of relevant and valuable literature which enriched my knowledge and with an opportunity to throw more light on this work. No words are strong enough to express my deep sense of gratitude to the LWF for all the facilities that they were opening up for me by arranging this trip abroad to know my problem in full and in depth and the direction of my analysis to the topic. In this connection, I should recollect the positive, constructive, useful and purposeful discussions I had with Dr Sagar C. Jain, Head, Department of Health Policy and Administration, University of North Carolina at Chapel Hill during my stay in the United States of America.
The services rendered by the personnel of the various Ministries in the Government of India, particularly the Ministry of Industry and Health, all leading Drugs and Pharmaceutical Companies in the country, public and private, libraries attached to the Bharathidasan University, Tiruchirapalli; CReNIEO, Madaras; Library of Public Health Sciences, University of North Carolina (USA), Institute for Social and Economic Change, Bangalore; Gokhale Institute of Politics and Economics, Pune; Centre of Advanced Studies in Economics, University of Bombay, Bombay; OPPI, Bombay; IDMA, Bombay; National Institute of Science, Technology and Development Studies, New Delhi; National Council of Applied Economic Research, New Delhi; and World Health Organisation, New Delhi are wholeheartedly acknowledged.

I appreciate and thank Mr S. Venugopal for his neat and fine execution of typing and for xeroxing the manuscript at short notice.

Striking a personal note, I wish to record my sincere thanks to my wife, Mrs. Darathy for the excellent standard of home management and our dear, loving daughters Punitha and Anitha. Their constant and continuous encouragement, forbearance and understanding helped me a good deal in completing this research work successfully.

Tiruchirapalli 17 G. John Raja
