SYNOPSIS

List of Figures

List of Tables

1 Introduction 1

1.1 Fusion and decay of CN ................................. 6

1.1.1 Decay of CN by evaporation .......................... 8

1.1.2 Decay of CN by fission ............................... 9

1.2 Deep inelastic collision ................................. 12

1.2.1 Experimental results and its theoretical interpretations ...... 14

1.2.1.1 Deflection function ............................... 14

1.2.1.2 Kinetic energy loss ............................... 15

1.2.1.3 Time of interaction ............................... 17

1.2.1.4 Angular momentum dissipation: theoretical limit ........ 18

1.3 Dinuclear orbiting ..................................... 20

1.3.1 Equilibrium orbiting model ........................... 22

1.3.2 Number of open channel ............................. 24

1.4 Motivation ............................................. 27
2 Experimental setup and data analysis technique

2.1 Accelerators

2.1.1 Variable energy cyclotron

2.1.2 BARC-TIFR Pelletron

2.2 Experimental setups

2.2.1 Scattering chambers

2.2.2 Charged particle telescopes: particle identification

2.2.3 Electronics and data collection

2.2.4 Measurements

2.3 Data analysis technique

2.3.1 Target thickness measurement

2.3.2 Gain matching factor

2.3.3 Energy loss correction of the projectile and fragments

2.3.4 Energy calibration of the telescopes

2.3.5 Calculation of cross section

3 Result: Fragment and light particle emission in \(^{16}\text{O} + ^{12}\text{C}\) reactions

3.1 Fragment emission study

3.1.1 Energy spectra

3.1.2 Angular distribution

3.1.3 Angular distribution of average \(Q\)-value

3.1.4 Excitation energy dependence of \(\langle Q\rangle\) averaged over angle

3.1.5 Total cross section of the fragment

3.2 Study of light charged particle emission

3.2.1 Energy spectra

3.2.2 Angular distribution

3.2.3 Average velocity

3.2.4 Statistical model calculations
6.3 Operation of the chamber ........................................ 108
  6.3.1 Operation of the pumping system ....................... 109
  6.3.2 Operation of target ladder .............................. 112
6.4 Status .............................................................. 114

7 Summary and conclusion ........................................... 116

List of Publications ................................................ 127
