[278] The surface energy of (unrelaxed) surface (σ\text{unreal}) was calculated according to the equation: σ\text{unreal} = \frac{1}{2}(E\text{surface} - nE\text{bulk}), where E\text{surface} is the total energy of the surface and E\text{bulk} is the total energy of the bulk. The total surface energy σ = σ\text{unreal} + E\text{real}; E\text{real} is the relaxation energy.
