List of Figures

1. Figure 1.1: Diagram showing the evolution of phytoplankton types on the basis of plastid diversity evolved through serial endosymbiosis

2. Figure 1.3 (a-1): Classification chart for diatoms

3. Figure 1.3 (b-2): Classification chart of dinoflagellates

4. Figure 1.7: Proportion of constituents for case 1 and case 2 waters

5. Figure 1.8: Specimen of a) Chlorophyll-α concentration and b) Suspended sediments concentration over Bay of Bengal, India using Indian satellite OCEANSAT-I Ocean colour monitor (OCM)

6. Figure 3.6 (b-1): Cruise track for Veraval cruise (a) 17\textsuperscript{th} to 19\textsuperscript{th} Nov-09 and (b) 4\textsuperscript{th} to 7\textsuperscript{th} Oct 2010

7. Figure 3.6 (b-2): (a) Sampling points for Monthly Veraval cruises from October 2011 to April 2012; (b) Sampling points for Porbander cruise on 14th March 2012

8. Figure 3.6 (b-3): Sampling points for Open Ocean cruise (SS-286) from 7\textsuperscript{th} to 19\textsuperscript{th} March 2011

9. Figure 3.6 (b-4): Sampling points for Open Ocean cruise (a) FORV-212 from 27\textsuperscript{th} February to 5\textsuperscript{th} March 2003, FORV-222 from 21\textsuperscript{st} February to 11\textsuperscript{th} March 2004, FORV-244 from 15\textsuperscript{th} April to 28\textsuperscript{th} April 2006 and FORV-253 from 28\textsuperscript{th} February to 11\textsuperscript{th} March 2007; (b) SS-263 from 1\textsuperscript{st} to 13\textsuperscript{th}, March 2009

10. Figure 4.2 (b-1): Richness of various Phytoplankton groups
11. Figure 4.2(c-1): Percent contribution of diatoms, dinoflagellates and other algae in winter and inter monsoon periods

12. Figure 4.2(c-2): Major phytoplankton species contributing to various groups in Open Ocean waters during winter monsoon periods

13. Figure 4.2(c-3): Major phytoplankton species contributing to various groups in Open Ocean waters during spring inter monsoon periods

14. Figure 4.2(d-1): Spatial distribution of phytoplankton cells over the Arabian Sea during winter and inter monsoon periods

15. Figure 4.2 (d-2): Massive Noctiluca bloom observed in the North-eastern Arabian Sea

16. Figure 4.2 (e-1): Comparison between various diversity indices of coinciding sampling sites of winter monsoon and inter monsoon seasons

17. Figure 4.2 (e-2): Correlation between phytoplankton cell counts and various Diversity indices

18. Figure 4.2 (e-3): Correlation between Dominance Index and Pielou Evenness Index

19. Figure 4.2 (e-4), 4.2 (e-5), 4.2 (e-6) and 4.2 (e-7): Shannon’s index for various stations of FORV-244, FORV-253, FORV-212 AND FORV-222 respectively

20. Figure 4.2(f-1): Percent contributions of diatoms, dinoflagellates and other algae in fall inter, winter and inter monsoon seasons

21. Figure 4.2(f-2): Major phytoplankton species contributing to various groups in coastal waters during fall inter monsoon season
22. Figure 4.2(f-3): Major phytoplankton species contributing to various groups in coastal waters during winter monsoon season

23. Figure 4.2(f-4): Major phytoplankton species contributing to various groups in coastal waters during spring inter monsoon season

24. Figure 4.2(g-1): Monthly changes in Diversity index for near and off shore stations

25. Figure 4.2(h-1): Phytoplankton distribution in the vertical column of water, varying at various percent light intensities

26. Figure 4.2(h-2): Concentration of phytoplankton types at depths with 100%, 5% and 1% light intensities

27. Figure 4.2(h-3): Correlation between phytoplankton cell counts and Chlorophyll-\(a\) at surface, DCM and 1% during winter and inter monsoon periods

28. Figure 5.2(b-1): Average bio-volume for shape code 1

29. Figure 5.2(b-2): Average surface area for shape code 1

30. Figure 5.2(b-3): Average bio-volumes for various shape codes

31. Figure 5.2(b-4): Average surface areas for various shape codes

32. Figure 5.3(a-1): Average carbon content for various shape codes

33. Figure 5.3(a-2): Average carbon content per unit volume of cell for various shape codes
34. Figure 5.4 (a-1): Distribution of phytoplankton sizes in the vertical profile of water, based on the percent availability of light (100%, 50% and 1%) for various shape codes. The size of the bubble represents the number of cells.

35. Figure 6.1 (b-1): Filtration assembly for Total and phytoplankton absorption

36. Figure 6.1 (c-1): UV-VIS Dual beam spectrophotometer used for measurement of optical densities

37. Figure 6.2 (b-1): Variations in phytoplankton absorption characteristics for (a) Mixed phytoplankton population (b) population dominated by diatoms and (c) population dominated by dinoflagellates

38. Figure 6.2 (c-1): Variations in phytoplankton absorption characteristics for bloom and non-bloom regions of north-eastern Arabian Sea
