Acknowledgements

During the five years that I worked on this project, many people have offered their invaluable comments, suggestions, ideas and other help without which this thesis would not have been possible. It is a great pleasure to offer my sincere thanks to them.

First of all I would like to express my special and deep debt of gratitude to my supervisor Prof. Jyotiprakash Tamuli, Head, Department of Linguistics, Gauhati University – firstly, for his invaluable guidance, help and constant encouragement throughout the period of my Ph.D work, and secondly, for reading and re-reading many drafts of this thesis and making many corrections and offering useful insights. His rigorous critical comments and positive suggestions are scattered throughout the thesis. I would also like to offer my sincere thanks to my teacher Dr. Anita Tamuli, Department of ELT, Gauhati University for her kind support and encouragement and for valuable suggestions on various aspects during the five years of my project.

My great debt of thanks is also due to Mr. David Philips and Ms. Virginia Philips of SIL International, with whom I spent three days in Tura in 2007 for making me familiar with Toolbox (a linguistic software for data analysis). They worked with me constantly and taught me every aspect of Toolbox so that I could develop a sense of self-confidence to work on my project efficiently even when they were no longer around. They are still available on the internet to help me with queries regarding Toolbox. Without their support and suggestions, it would not have been possible to complete this thesis. I would also like to thank Dr. Warren Glover, another consultant from SIL International, who helped me in handling the Toolbox with efficiency during my analysis. My debt of gratitude is also due to Ms. Jessie Glover for her kind support, cooperation and facilitation.

I am deeply indebted to Prof. Scott DeLancey, University of Oregon, USA, and to Dr. Stephen Morey for their insightful comments on my work and more generally, on various aspects of linguistic research. My deep sense of gratitude goes to Dr. Runima Chowdhary, Department of Linguistics, Gauhati University, for offering valuable insights into various topics relating to grammar.

My sincere gratitude also goes to Dr. Mark Post, University of Bern, who helped me by answering many questions through e-mail, commenting on various aspects of this
work, and sending copies of his papers. I am also very grateful to Dr. Matthew W. S. Toulmin for his invaluable suggestions at the initial stage of this project.

I would like to express my deep gratitude to Dr. Andrew Hardie, Lancaster University, UK, who helped me enormously by including the corpus of *Rāmāyana* in CQPweb (Corpus Query Processor) on the one hand and by allowing me to access the data on that web on the other. My special thanks goes to those linguists whose theoretical and descriptive studies I have drawn on. They have all contributed in a big way in completing this work.

I should also like to acknowledge my indebtedness to my teacher Dr. Padmini Boruah, Department of ELT, Gauhati University for her encouragement and suggestions. I wish to offer my warm thanks to Prafulla Basumatary, Nivedita Malini Barua, Khamseng Baruah and Krishna Boro for their support and encouragement.

Finally, I owe an extreme debt of gratitude to my parents, Mr. Lila Bez and Mrs. Runumi Bez, my elder brother Dr. Ghanashyam Bez, my best friend Anjal Borah, and to all my family members, who offered constant support, love and encouragement during the years I spent working on this project.

The responsibility for all errors and inaccuracies in this work, are, of course, mine.
