ACKNOWLEDGEMENT

I begin this note by expressing my gratitude to the Almighty who created the right conditions to arrive at this great milestone in my life. All praise is due to Him and nothing is ever possible without His will.

I would like to express my deepest sincere gratitude to my supervisor Dr. J. Gowrishankar, Staff scientist, Laboratory of Bacterial Genetics and Director, CDFD, for giving me an opportunity to work on a project that aroused my curiosity. His continuous guidance, invaluable suggestions, encouragement, generous help and patience are greatly acknowledged. His keen interest on the topic and considerate support on my effort was a source of inspiration to carry out the study despite all odds. I take this as an opportunity to personally thank him for his supervision and willingness to share his experience in the field.

I am very grateful to Dr. Seyed E. Hasnain, former director CDFD, for his words of encouragement that prompted me to embark on this journey and helped me in achieving this milestone in life.

Simultaneously, I would like to express my special appreciation to Abhijit, Hari, Anupama and Krishnaleela for the fruitful discussions and help throughout my graduate years.

I thank Mr. Hersh Parekh and Mr. Pratap Naidu from Life Technologies, the members of NGTF, CDFD, Ms. Manjari and Mr. Seshadri Gowrishankar for help with the SOLiD™ analysis. I would also like to thank Dr. Manjula and Ms. Saisree from CCMB for helping me with strains whenever required.

I would like to convey my thanks to Shaffiqu for timely assistance with various resources in the laboratory that helped me accomplish this task with ease. It is always with a feeling of nostalgia that I will recall his witty, timely and unique sense of humour in the days to come. My special thanks to Rakesh, Geetha, Shivalika, Nora, Shanthy, Amit, Amar, Aanisa, Raj, Nalini, Suchitra, Rajeshree, Mishraji, Srinivas, Bindu, Vimala, Vijay and Noor for making my days in CDFD enjoyable and memorable. A word of thanks goes to all my JRF2004 batch mates who made my coursework days memorable. I would also like to thank Vansee, Giri, Jagan, Uzair and Ramesh for ensuring that the reagents and paraphernalia needed at all times were available ready to use. A special word of thanks goes to Debashish for his willingness to assist me in my DGGE work. His enthusiastic support and willingness to learn how I wanted to do things made working with him a pleasure.

I gratefully acknowledge the generous scholarship provided by CSIR and the facilities and assistance provided by CDFD that greatly helped me in my work.

I would run short of words trying to express the invaluable effort my parents have invested in making this work a reality. Finally, I would like to express my special indebtedness to my husband, both my families whose continuous encouragement and support was an unremitting source of inspiration for this work. A special mention goes to all my relatives, especially my two younger aunts, who did not spare any opportunity to help me out in this marathon task.

Last, but most importantly, it is with fondness that I mention my little darling Maryam whose presence has made my life so much more busy yet meaningful and enjoyable.

- Aisha.
