Acknowledgements

This dissertation would not have been possible without the guidance and the help of several individuals who in one way or another contributed and extended their valuable assistance in the preparation and completion of this study.

First and foremost, my utmost gratitude to Prof Anindya Sinha, my doctoral supervisor, whose never ending support, sincere guidance and unflinching confidence in me have been the beacons of inspiration as I overcame all the obstacles in the completion of this research work. I consider his contribution in my work equally important if not more than me. Prof Sinha, whom I fondly call Rana-da, has been a patient teacher, wise critique and my philosophical guru, not to mention my sanctuary of peace whenever I needed his assistance in matters small and big. He never denied me any help, academic or non-academic, sometimes at a high personal cost, whenever I needed one. It will never be possible for me to fully reciprocate his favours even if I try my best.

Dr Uma Ramakrishnan, my doctoral co-guide, taught me population genetics. Her academic zeal and selfless dedication to science have been the guiding light in my research. She never said no to me whenever I needed any logistical support. I do not think I could have achieved my personal maturity as an academician without our often hours-long discussions in her office or in the botanical garden in front of our laboratory at National Centre for Biological Sciences (NCBS), Bangalore. I do not think I have the ability to emulate her passion for scientific research but I am sure it will always be my gold standard in years to come.

Dr M D Madhusudan, my thesis committee member, has been extremely helpful with his opinion about my work. I am deeply indebted for his constant encouragement and all-round help at Nature Conservation Foundation (NCF), Mysore.

The executive board members of NCF gave me the opportunity to start my doctoral study and never stopped from positively criticising and encouraging my work. I shall always be indebted to them for these contributions. In their personal capacities, Dr T R Shankar Raman and Dr Divya Mudappa have always welcomed me with their warm and blissful company at their Valparai, Tamil Nadu residence during my fieldwork. Dr Charudutt Mishra has always been a smiling, pillar of encouragement. I also had a good fortune of co-authoring a paper with him. In my experience, he carries work efficiency to a unprecedented and dizzying height. Dr Aparajita Dutt
has been a great colleague and a resource person for Arunachal Pradesh, India, in general. I am also thankful to her for collecting biological samples from Arunachal Pradesh. Dr Yash Veer Bhatnagar has been more than a colleague at NCF. He is a valuable friend who never ran short of encouraging words with a smiling face. I first met Dr Suhel Quader at NCBS and started admiring his intellect from that moment itself. I was delighted when he joined NCF and had a good fortune of learning science from him. Last but not the least, Dr Rohan Arthur, the present director of NCF, has been extremely helpful with increasing the quality of my PhD proposal with his wise comments. In addition, I have gained immensely from the discussions I had with him.

I would like to thank NCF students and colleagues who made my stay and work in Mysore interesting and cheerful. I specially mention my closest friends Mr Riyaz Ahmed and Mr Manish Chandi with whom I shared many fond memories. I would also like to thank Dr Aaron Lobo, Dr Ayesha Prasad, Dr Farshid R Ahrestani, Dr Sumanta Bagchi, Dr Tsewang Namgail, Mr Rohit Naniwadekar, Dr Coralie D’lima, Mr Vardhan Patankar, Ms Rucha Karkarey, Ms Ranjini Murali, Ms Saloni Bhatia, Mr M O Anand, Mr Atul Arvind Joshi, Mr Rishi Kumar Sharma, Mr Kulbhushansingh Suryawanshi, Mr Rajeev Pillay, Ms Swati Sidhu, Mr Karthik Teegalapalli and Mr Nachiket Kelkar. Mr R Raghunath has been both a good friend and provider of technical help with GIS. Ms Vena Kapoor, Ms Rakhee Karumbaya Ms Smita Prabhakar and Ms Tanuja D H have been most helpful with all the official work. I could never meet up with report deadlines without their strict but gentle reminders. I thank them whole-heartedly. Finally, the office staff at NCF office, Mr Naveen Raj and Mr R Viswanath who were the people I am heavily indebted for their overall support and help.

There are some more people linked to NCF whom I highly admire and would like to thank them for their support in various ways during the last five years. Ms Pavithra Sankaran is a good friend who provided me with roof above my head and good food in my stomach many a time in their beautiful flat in Mysore. I always found encouragement and peace amidst chaos in discussions with Dr Pranav Trivedi. These two things helped me immensely many a times and I thank him for that.

Among my friends from Bangalore, I would like to thank first and foremost Dr Samrat Mondol, always a helping hand in the laboratory and a good friend during the rainy days. Dr Robin V Vijayan helped me with my fieldwork, gave me support both academically and non-academically,
hosted me in Fresno, California and above all helped me making lemonade when life was giving me lemons. Another friend from Thrissur, Kerala, Mr Jiffy James Vadakkan made my life easy with his joyful company during my first couple of years in Bangalore. I also fondly acknowledge Dr Rishi Kumar and Mr Mayukh Chatterjee for teaching me about primates and their behaviours in the field. Mr Narayan Sharma is an inspiration who taught me about efficiency, dedication and friendship. I spent many hours discussing science, philosophy and Marxism with Mr Subhankar Chakraborty and in the process learning from him. I would like to specially thank Mr Velumani Selvaraj, Mr Jeevan, Mr Thejaswi Sivanand and many more colleagues, past and present, from Ramakrishnan laboratory who directly or indirectly helped with my research or made my life easy in their own ways.

I am also indebted to Ms Sonia Joseph, Mr Ranjith and innumerable staff of NCBS for their technical and logistical help with my work. I would also like to thank the staffs in the accounts and administration sections for their whole-hearted support all through my stay ay NCBS.

My fieldwork was a long drawn process mostly because my field was distributed across the southern India comprising of five states, namely Maharashtra, Andhra Pradesh, Karnataka, Kerala and Tamil Nadu. It was a Herculean task but I could finish it eventually due to the selfless help of many close friends and colleagues who I thank here sincerely. Some of the numerous people who supported me in the field and not mentioned above are Mr Girish Beedeshee, Ms Devika Saranya, Mr Subhankar Chakraborty, Dr Rishi Kumar and Mr Vaibhav Chaturvedi.

Prof David G Smith, University of California, Davis, Dr Ripan S Malhi, University of Illinois, Urbana-Champaign, USA and Prof Mike Bruford, Cardiff University, UK invited me to their laboratories where I learned about various techniques in molecular genetics which helped me immensely with my research. Among many colleagues from those laboratories, I sincerely thank Dr Sree Kanthaswamy, Dr Jessica Satkosky-Trask, Mr Jesse Johnson, Dr Milena Shattuck, Ms Debra George, Dr Milena Salgado Lynn and Dr Rui Sa among many.

Dr Kakoli Mukhopadhyay (Kakoli-di) provided me with my home away from home in Bangalore. She has been such a selfless and loving pillar of support for me in the last five years that I doubt if I could ever repay my debts to her.
Besides being my best friend and soul mate, Ms Shreejata Gupta has been the strictest critiques of my work and manuscripts, patient listeners of often-outlandish ideas and wisest counsellors during my nervous breakdowns. She helped me with my work in the field, in the laboratory as well as during the course of writing this thesis. I learned lessons of dedication, diligence and perseverance from her passion for research. The thesis would have been less than what it is now if it were not for her incessant contribution.

My parents, Ms Subhra Chakraborty and Mr Biswanath Chakraborty are the reason that I ever dreamt of doing a PhD. They have been my inspiration in life and their encouragement, support and blessings helped me finish my research, almost in time. It is difficult to thank the people who are responsible for my very existence in this world but I can, at the least, offer them my humblest gratitude for always believing in me.

Last but not the least; I thank my sister Ms Debi Samanta and brother-in-law Mr Joy Prasad Samanta, who have always been my guardian angels during the hard times. They hold the fort in Calcutta regardless their own difficulties so I can finish my PhD without any hassle in Bangalore.
