

CONTENTS

1. INTRODUCTION	1
2. REVIEW OF LITERATURE	6
2.1 Importance of mycorrhizae	6
2.2 Occurrence of VAM in plant communities-plants	7
2.3 Occurrence of VAM in relation to soil abiotic characters and seasons	9
2.4 VAM-concept of host preference	12
2.5 Mass inoculum production of VAM	14
2.6 Selection of efficient VAM fungi using host plants	15
2.7 VAM and plant growth	16
3. MATERIALS AND METHODS	18
3.1 Study localities	18
3.2 Selection of sites	19
3.3 Field sample collection - soil and samples	19
3.4 Estimation of VAMF root colonization	20
3.4.1 Trypan blue in lactophenol method	20
3.5 Isolation and identification of VAM fungal spores and sporocarps	21
3.5.1 Wet - sieving and decanting technique	21
3.6 Study of correlation between VAMF variables and physico - chemical characteristics of the soil	22
3.7 Pot experiments	22
3.7.1 Host plants used	23
3.7.2 VAMF inocula used	23
3.8 Bioassay for infection efficiency and confirmation of VAMF spores cum inoculum production	24
3.9 Study of the effect of VAMF on growth and physiological parameters of mulberry cultivars	26
3.9.1 Morphological parameters	28
3.9.2 Estimation of chlorophyll content	28
3.9.3 Estimation of minerals	29
3.9.4 Biochemical parameters	30
3.9.4.1 Estimation of acid and alkaline phosphatases in leaves of mulberry	32
3.9.4.2 Determination of proteins qualitatively by SDS - PAGE	32
3.10 Silkworm rearing experiment	36
3.11 Microscopy and photomicrography	37
3.12 Statistical analysis	37

4. RESULTS	38
4.1 General edaphic characteristics of the study localities	38
4.2 Seasonal variation and incidence of VAMF colonization in cultivars of mulberry surveyed	40
4.3 Seasonal variation in spore population of VAMF	42
4.4 Correlation between VAMF spore number and physico - chemical characteristics of the root-zone soils of mulberry cultivars at different ecosystems	48
4.5 Infection efficiency and confirmation of native VAMF species	51
4.6 Pot experiments	52
4.6.1 Selection of an efficient strain of native VAMF using mulberry cultivar MR2	52
4.6.1.1 Morphometric parameters	52
4.6.1.2 Nutritional and biochemical parameters	54
4.6.2. Influence of native and introduced VAM fungi using mulberry cultivar Kanva2	55
4.6.2.1 Morphometric parameters	56
4.6.2.2 Nutritional and biochemical parameters	58
4.7 Bioassay	58
5. DISCUSSION	59
5.1 Variation in colonization	61
5.2 Variation in arbuscules and vesicles	65
5.3 Variation in spore density	65
5.4 VAMF spores-correlation with soil abiotic characteristics ...	70
5.5 VAMF-inoculum production	74
5.6 Pot culture experiments	75
5.6.1. Selection of an efficient strain of VAMF using mulberry cultivar MR2	75
5.6.2. Influence of native and introduced VAM species using mulberry cultivar Kanva2	80
5.7 Leaf quality and silkworm rearing performance	82
6. SUMMARY	84
