

LIST OF FIGURES

1. Map of Kerala State, India (Ecosystem demarcation)
2. Bioassay of six native VAM species (isolated from root-zone soils of mulberry) on *Allium ceba* L.
3. Influence of different native VAMF on colonization percentage and spore numbers/100g root zone soils of mulberry cultivar-MR2.
4. Effect of different native VAM species on sugars in mulberry cultivar - MR2
5. Effect of different native VAM fungi on total protein and amino acid contents of mulberry cultivar MR2
6. Effect of different native VAM fungi on total phenol and lipid content of mulberry cultivar-MR2
7. Influence of different native VAM fungal species on phosphatases in mulberry cultivar - MR2
8. Influence of different native VAM fungi on colonization percentage and number of spores/100g root-zone soils of mulberry cultivar Kanva2
9. Effect of different native VAM fungi species on sugar contents in mulberry cultivar-Kanva2
10. Effect of different native VAM fungi on protein and amino acid contents of mulberry cultivar-Kanva2.
11. Influence of different native VAM fungi on phenol and lipid content of mulberry cultivar-Kanva2
12. Influence of different native VAM fungi on acid and alkaline phosphatases of mulberry cultivar-Kanva2.
13. Influence of different introduced VAM fungi on colonization percentage and number of spores per 100g soil (mulberry cultivar-Kanva2)
14. Effect of different introduced VAMF species on sugars in mulberry cultivar-Kanva2
15. Effect of different introduced VAM fungi on total protein and amino acid content of mulberry cultivar-Kanva2
16. Influence of different introduced VAM fungi on phenol and lipid content of mulberry cultivar-Kanva2
17. Influence of different introduced VAM fungi on acid and alkaline phosphatases in mulberry cultivar-Kanva2
