Table Index

Table 3.1 Physiochemical parameters of shrimp culture pond
Table 3.2 Distribution of cyanobacteria in different shrimp ponds at Chidambaram region.
Table 3.3 Distribution of cyanobacteria in different shrimp ponds at Cuddalore region.
Table 3.4 Occurrence of cyanobacterial species in shrimp culture ponds
Table 4.1. Proximate composition of the different feed ingredients (% dry weight)
Table 4.2. Mineral composition of feed ingredients (ppm)
Table 4.3. Composition of different cyanobacterial meal supplemented feed (% dry weight)
Table 4.4. Proximate composition of different shrimp feed supplemented with cyanobacterial (Dry feed)
Table 4.5. Stability study of different cyanobacterial supplemented feed in water (physical stability)
Table 4.6 Growth performance of *P. monodon* fed with cyanobacterial supplemented feed (60 days)
Table 4.7 Proximate composition of *P. monodon* fed with cyanobacteria supplemented feed for 60 days. (g % on dry weight basis)
Table 4.8 Physiochemical parameters of shrimp culture tank while using cyanobacterial supplemented feed (60 days)
Table 4.9 Occurrence of different bacterial species in shrimp growth tank water on different days
Table 4.10 Occurrence of different bacterial species in shrimp intestinal tract on different days
Table 4.11 Occurrence of different fungi in water sample during cyanobacterial feed study
Table 4.12 Occurrence of different fungi in the intestinal tract during cyanobacterial feed study

Table 4.13 Composition of *Spirulina* meal supplemented feed

Table 4.14 Proximate composition of the *Spirulina meal* supplemented feeds (% dry weight)

Table 4.15 Physical stability of *Spirulina* meal supplemented feed in water

Table 4.16 Growth performance of *P. monodon* fed with *Spirulina* experimental feed (60 days)

Table 4.17 Proximate composition of *P. monodon* fed with *Spirulina* meal supplemented feed on 60 days (% dry weight)

Table 4.18 Physiochemical parameters of shrimp culture tank during the study of *Spirulina* meal supplemented feed 60 days

Table 4.19 Occurrence of bacterial flora at various period of shrimp growth (tank water)

Table 4.20 Occurrence of bacterial flora at various period of shrimp growth in the intestinal tract of shrimp

Table 4.21 Occurrence of different fungi in shrimp growth tank during *Spirulina* meal supplemented studies

Table 4.22 Occurrence of different fungi in the intestinal tract of shrimp fed *Spirulina* meal supplemented feed

Table 4.23 Proximate and mineral composition of the seaweed-supplemented feeds

Table 4.24 Physical stability of seaweed supplemented (% dry weight)

Table 4.25 Effect of seaweed on growth performance of *Penaeus monodon*

Table 4.26 Proximate composition of *P. monodon* fed with seaweed supplemented feed on 60th day.

Table 4.27 Physiochemical parameters of the control and experimental culture tanks after 60th days

Table 4.28 Bacterial abundance in shrimp growth tank during shrimp fed with different seaweed feed

Table 4.29 Bacterial abundance in shrimp intestinal tract while fed with different seaweed feed

Table 4.30 Occurrence of different fungi in water sample (Seaweed supplemented feed study)
Table 4.31 Proximate composition of commercial control feed and other selected experimental feeds
Table 4.32 Physical stability of feeds
Table 4.33 Growth performances of shrimp *P. monodon* fed with commercial feed and experimental feeds (30 days)
Table 4.34 Proximate composition of shrimp fed with commercial feed and other experimental feeds (30 days).
Table 4.35 Physicochemical analysis of tank water
Table 5.1 Proximate composition of feeds storage at 25 °C
Table 5.2 Proximate composition of feeds storage at 35 °C
Table 5.3 Different bacterial and fungal isolates on different storage days (25 °C)
Table 5.4 Different bacterial and fungal isolates on different storage days (35 °C)
Table 6.1 Proximate composition of the probiotics supplemented feeds (g in dry weight basis)
Table 6.2 Mineral composition of the probiotics supplemented feed
Table 6.3 Experimental feed physical stability study (% dry weight basis)
Table 6.4 Growth performance of *Penaeus monodon* fed with probiotics supplemented feed (60 days)
Table 6.5 Proximate composition of *P. monodon* fed with probiotic diet after 60 days
Table 6.6 Physico-chemical parameters of the shrimp culture tank
Table 6.7 Stability of probiotic organisms against water
Table 6.8 Stability of probiotics on feed storage at different days (25 °C)
Table 6.9 Occurrence of different bacteria in shrimp growth tank water (shrimp fed with probiotic supplemented feed)
Table 6.10 Occurrence of different bacteria in shrimp intestinal tract (shrimp fed with probiotic supplemented feed)
Table 7.1 Ranges of water quality parameters in *P. monodon* growth tanks during live feed experimental studies

*Continue...*
Table 7.2 Proximate composition of shrimp fed with different micro algal diet
Table 7.3 Occurrence of different bacteria in shrimp growth tank water (live feed study 30 days)
Table 7.4 Occurrence of different bacteria in shrimp intestinal tract (live feed study 30 days)
Table 7.5 Occurrence of different fungus in shrimp growth tank water (live feed study 30 days)
Table 8.1 Cost of feed ingredients
Table 8.2 Cost of formulated feeds
