

Chapter II	Assessment of Woody Vegetation	43-55
2.1	Introduction.....	43
2.2	Material and Methods.....	45
2.2.1	Sampling Design.	45
2.3	Results and Discussion.....	47
2.3.1	Evergreen forest.....	48
2.3.1.1	Species Richness, Families and Distribution.....	48
2.3.1.2	Basal area and Stand Density.....	48
2.3.1.3	Importance Value Index and Diversity indices.....	48
2.3.1.4	Understory Components.....	49
2.3.2	Semi Evergreen forest.....	49
2.3.2.1	Species Richness, Families and Distribution.....	49
2.3.2.2	Basal area and Stand Density.....	49
2.3.2.3	Importance Value Index and Diversity indices.....	50
2.3.2.4	Understory Components.....	50
2.3.3	Riparian forest.....	50
2.3.3.1	Species Richness, Families and Distribution.....	50
2.3.3.2	Basal area and Stand Density.....	50
2.3.3.3	Importance Value Index and Diversity indices.....	51
2.3.3.4	Understory Components.....	51
2.3.4	Dry Mixed Deciduous forest.....	51
2.3.4.1	Species Richness, Families and Distribution.	51
2.3.4.2	Basal area and Stand Density.....	51
2.3.4.3	Importance Value Index and Diversity indices.....	52
2.3.4.4	Understory Components.....	52
2.3.5	Southern Thorn forest.....	52
2.3.5.1	Species Richness, Families and Distribution.....	52
2.3.5.2	Basal area and Stand Density.....	53
2.3.5.3	Importance Value Index and Diversity indices.....	53
2.3.5.4	Understory Components.....	53
2.4	Conclusion.....	54

6.2.3.4 Land Capability map / Sustainable land management... ..	120
6.2.3.5 GIS Modelling.....	121
6.2.3.5.1 Potential sites for Reforestation.....	121
6.2.3.5.2 Potential sites for Agroforestry.....	121
6.2.3.5.3 2 Potential sites for Floriculture.....	122
6.2.4 Conclusion.....	122
Recommendations, Major Findings and Areas for Further Studies	123-130
Summary	131-133
Bibliography	
Annexure I	
Annexure II	
Annexure III
