b. Foraging behaviour
   i. Perch use 33
   ii. Foraging height 35
   iii. Foraging substrate 35
   iv. Foraging plants 36
   v. Foraging position on trees 36
   vi. Foraging height on plants 36
   vii. Foraging method 37
   viii. Niche breadth 37
   ix. Niche overlap 39
   x. Principal Component Analysis 39

3. Time Activity Budget
   a. Bee-eater 40
      i. Feeding 40
      ii. Flying 41
      iii. Resting 42
      iv. Analysis of variance 42
   b. Drongo 42
      i. Feeding 43
      ii. Flying 43
      iii. Resting 44
      iv. Analysis of variance 44
   c. Blue jay 45
      i. Feeding 45
      ii. Flying 46
      iii. Resting 46
      iv. Analysis of variance 47

4. Breeding Ecology
   a. Nest cavity characteristics 48
   b. Morphometry of eggs 48
   c. Clutch size 49
   d. Hatching success 49
   e. Fledging success 49
   f. Nestling growth 49
   g. Polynomial regression lines 50
V. DISCUSSION

1. Population Density 52

2. Food and Feeding Habits
   a. Pellet morphometry 56
   b. Prey composition 56
   c. Perch use 59
   d. Foraging height 60
   e. Foraging substrate 61
   f. Plant substrate 62

3. Time Activity Budget
   Bee-eater 62

4. Comparison of Time Budgets of the Three Bird Species 64

5. Foraging Niche Overlap with Black Drongo and the Blue Jay 65

6. Breeding Ecology
   a. Nest cavity characteristics 67
   b. Morphometry of eggs 68
   c. Clutch size 69
   d. Hatching success 70
   e. Fledging success 71
   f. Morphometry of nestlings and nestlings growth 71
   g. Polynomial regression lines 72

7. Management Implications and Suggestions for Future Research 73

VI. SUMMARY 74
