LIST OF FIGURES

1.1 Overview of Cloud Computing Paradigm ............... 1
1.2 Overview of Access Provision in Cloud Computing ... 11
1.3 Organisation of Thesis .................................. 21

3.1 System Design of Collective Scheme .................. 40
3.2 Security Analysis Results .............................. 54

4.1 System Design of SCFAP ................................. 70
4.2 Access Assignment Structure ............................ 71
4.3 Access Limits Associated With a Grade ............... 72
4.4 Barrier Generations ...................................... 73
4.5 Cloud Based Financial System-A Case Study ......... 83
4.6 Architecture of SCFAP over Eucalyptus Cloud ........ 87
4.7 Calculation of File Retrieval Time ...................... 91
4.8 Comparative measure of fine grained access provision with existing schemes ....................... 93

5.1 System Design of SAPERM ............................... 110
5.2 Mappings Involved in SAPERM scheme ............... 111
5.3 Organisation Structure .................................... 127
5.4 Implementation of SAPERM Over OpenStack Nova Cloud 135
5.5 CSI Latency Analysis ...................................... 138

6.1 System Design of PPODEA Scheme .................... 151
6.2 Overview of PPODEA ...................................... 158
6.3 Security Tick Rate Comparisons .......................... 178
6.4 Decryption Time Computation Process ................. 179
6.5 Encryption Time Computation Process ................. 180

7.1 Overview of ISA Scheme ................................. 194
7.2 Working of Multiple Agents in ISA Scheme .......... 196
7.3 Outer Index Descriptions ............................... 198
7.4 Inner Index Descriptions ............................... 199
7.5 Inner Index Descriptions ............................... 200
7.6 Comparison of ISA to Thesis Goals ................... 204
