

LIST OF TABLES

TABLE NO.		PAGE
I.	Quantity (gm) of chemicals required per litre of water to provide 100 millimolar concentration	30
II.	Oviposition rate and dimensions of eggs of <u>P. hygrophilus</u>	42
III.	Egg development in <u>P. hygrophilus</u> at 27 ± 1°C	43
IV.	Dimensions of post-embryonic stages of <u>P. hygrophilus</u> cultured in oat meal agar 4%	49
V.	Post-embryonic growth of <u>P. hygrophilus</u>	56
VI.	Final populations of <u>P. hygrophilus</u> in different substrates	63
VII.	Growth characteristics of <u>P. hygrophilus</u> . Estimated biomass of <u>P. hygrophilus</u> in 10 substrates (expressed in microgrammes) based on data from Table VI and Table VIII	66
VIII.	Measurements of post-embryonic stages of <u>P. hygrophilus</u> cultured in 10 substrates	68
IX.	Correlation of doses with mortality of <u>P. hygrophilus</u> in molar conc. of chemicals	73
X.	Analysis of percentage of adults in the final population developed with salts in the media	78
XI.	Effect of salts in media on the build up of <u>P. hygrophilus</u> populations	80
XII.	Morphometric variations in <u>P. hygrophilus</u> developed in media with salts	81
XIII.	Analysis for the percentage of adults in the final population developed with amino acids in the media	86
XIV.	Effect of amino acids in the media on the build up of <u>P. hygrophilus</u>	87

TABLE NO.		PAGE
XV.	Morphometric variations in <u>P. hygrophilus</u> developed in media with amino acids	89
XVI.	Analysis for the percentage of adults in the final population developed with vitamins in the media	96
XVII.	Effect of vitamins in media on the build up of <u>P. hygrophilus</u>	97
XVIII.	Morphometric variations in <u>P. hygrophilus</u> developed in media with vitamins	99
XIX.	Analysis for percentage of adults in the final population developed with growth promoting chemicals	107
XX.	Effect of growth promoting chemicals in the media on the build up of <u>P. hygrophilus</u>	109
XXI.	Morphometric variations in <u>P. hygrophilus</u> developed in media with growth promoting chemicals	111
