Acknowledgement

No research can be carried out without the unconditional support and guidance of mentors who have a belief in researcher’s approach, enquiry, expertise, skills, potential and ideas. The ultimate goal of every research mentor is to help his or her mentee to establish as an independent researcher. I am thankful for the passionate mentorship offered by my research guide who provided his immense support and inputs to make this research meaningful and accurate. It is because of his spontaneous efforts and eagerness to be part of the social innovation which this research study signifies.

I am also indebted to several foreign research collaborators who helped me collect survey data from their respective countries which were so important to this research work. It is because of their valuable inputs that such a transnational data could be collected. Moreover my research collaborators also helped in translating the questionnaire in foreign languages and in fine tuning the final questionnaire.

During the entire research work on this cross cultural topic, there was a special role of the environment, infrastructure, enabling factors which my research center has provided. It was because of the campus facilities, academic environment, abundant resources, cues provided by so learned professors at the research center which made it possible to complete this complex research.

This acknowledgement will be entirely incomplete without mentioning the whole hearted support provided by my employers who have a policy to encourage world class research and make sure sufficient time and resources are provided to its employees to carry out all kinds of research work. The bright students of cross cultural courses and Professors were always forthcoming to participate in any discussions, sessions, seminars, debate on several aspects of this research. I am especially indebted to Prof. A.R. Mishra and Prof. Mukesh Porwal, who suggested most innovative methods to fine tune CFC model using transnational data. They also helped me in explaining the use of key modeling techniques which proved to be high point of this research in making the CFC model most useful for the enquiry. At the same time I am grateful to Dr. A.K. Puri, who could find time to sit with me to debate over the approach to my research work, for hours from his busy schedule and who went all out to provide all possible resources to complete this research. I am thankful to all my sponsors who provided
financial assistance to participate in important international conferences at Holland and at Turkey to present my research papers related to this research.

On a personal note this acknowledgement deserves a special mention of my indebtedness to my wife, and college going daughter and son, who were so supportive to provide me an environment of peace at home to make sure best of my mind is able to bring the excellence in this research work.
