## SECTION-I : COAL

<i>Sl. No.</i>	<i>Contents</i>	<i>Page No.</i>
1.	Introduction	1-13
	1.1 Resources	
	1.2 Sulphur in coal	
	1.3 Microbial desulphurisation of coal	
	1.4 Present investigation	
2	Review of Literature	14-33
	2.1 Microorganisms important for microbial desulphurisation of coal	
	2.2 General Traits of <i>T. ferrooxidans</i>	
	2.3 Microbial desulphurisation of coal with <i>Thiobacillus ferrooxidans</i>	
	2.4 Coal structure, distribution and mechanism of pyrite oxidation	
	2.5 Jarosite formation	
	2.6 Kinetics	
	2.7 Microbial desulphurisation and flotation	
3.	Materials and Methods	34-53
	3.1 Coal samples	
	3.1.1 Collection of coal samples	
	3.1.2 Coal analysis	
	3.2 Microorganism	
	3.2.1 Isolation	
	3.2.2 Maintenance and storage of cultures	
	3.3 Growth studies in shake flask	
	3.3.1 Preparation of cell suspension	
	3.3.2 Growth	
	3.4 Growth studies in bioreactor	
	3.4.1 Bioreactor design	
	3.4.2 Bioreactor experiments	
	3.5 Microbial desulphurisation of coal samples in shake flasks	

<i>Sl. No.</i>	<i>Contents</i>	<i>Page No.</i>
3.6	Microbial desulphurisation of lignite in bioreactor	
3.7	Biobeneficiation	
3.7.1	Flotation followed by bacterial leaching	
3.7.2	Bacterial conditioning followed by flotation	
3.8	Microscopic studies on microbial desulphurisation	
4	Results and Discussion	54-98
4.1	Growth studies of <i>Thiobacillus</i> cultures in shake flasks	
4.1.1	Growth of <i>T. ferrooxidans</i> in absence of coal in the media	
4.1.2	Growth of <i>T. ferrooxidans</i> in presence of coal in the media	
4.1.3	Growth of <i>T. ferrooxidans</i> in presence of increased cell concentration in the media	
4.2	Growth studies of Tf-R in Agitated Aerobic Bioreactor	
4.3	Microbial desulphurisation of coal	
4.3.1	Influence of initial pH	
4.3.2	Influence of pulp density	
4.3.3	Influence of particle size	
4.3.4	Influence of media composition	
4.3.5	Influence of time period on microbial desulphurisation of lignite	
4.3.5.1	Kinetics of sulphur removal from coal in shake flask studies	
4.3.6	Microbial desulphurisation of Rajasthan lignite in a bioreactor	
4.3.6.1	Kinetics of sulphur removal from Rajasthan lignite in bioreactor studies	
4.4	Biobeneficiation studies on Assam coal	
4.5	Microscopic studies	
5.	Conclusions	99-105
	BIBLIOGRAPHY	106-125

## SECTION-II : MANGANESE

Sl. No.	Contents	Page No.
1.	Introduction	126-133
	1.1 Resources	
	1.2 Beneficiation	
	1.3 Biological importance of manganese	
	1.4 Bioreduction of manganese	
	1.5 Present investigation	
2.	Review of Literature	134-149
	2.1 Isolation of manganese leaching microorganisms	
	2.2 Mechanism of bioleaching of manganese ore	
	2.3 Bioleaching of manganese ore	
3.	Materials and Methods	150-156
	3.1 Manganese ore	
	3.1.1 Analysis	
	3.2 Microorganisms	
	3.2.1 Isolation of microorganisms	
	3.2.2 Screening of microorganism for leaching efficiency	
	3.2.3 Identification	
	3.3 Growth studies	
	3.4 Bioleaching studies	
	3.5 Leaching of manganese with culture filtrate of <i>P. citrinum</i>	
	3.6 Leaching of manganese ore with various acids	
	3.7 A comparative study on bioleaching with <i>P. citrinum</i>	
	3.8 Bioaccumulation and adsorption studies	
	3.8.1 Bioaccumulation studies	
	3.8.2 Adsorption of manganese on ore	
4.	Results and Discussion	157-187
	4.1 Microorganism	
	4.1.1 Isolation and identification	
	4.1.2 Taxonomy	
	4.1.3 Morphology	
	4.2 Growth studies of <i>Penicillium citrinum</i>	
	4.2.1 Growth of <i>P. citrinum</i> in shaking condition	
	4.2.2 Growth of <i>P. citrinum</i> in static condition	
	4.3 Manganese ore	

<i>Sl. No.</i>	<i>Contents</i>	<i>Page No.</i>
4.4	Leaching of low grade manganese ore	
4.4.1	<i>In-situ</i> leaching	
4.4.1.1	Influence of particle size	
4.4.1.2	Influence of pulp density	
4.4.1.3	Influence of sucrose concentration	
4.4.1.4	Influence of inoculum size	
4.4.1.5	Influence of time period	
4.4.2	Leaching of manganese ore with biomass free culture solution	
4.4.3	Leaching with synthetic acids	
4.5	Kinetics	
4.6	A comparative study on bioleaching of manganese ores collected from four different places	
4.7	Bioaccumulation studies	
4.7.1	Bioaccumulation studies	
4.7.2	Adsorption of manganese on manganese ore	
5	Conclusions	188-194
	BIBLIOGRAPHY	195-207
