

# List of Tables

## SECTION-I

### COAL

<i>Fig. No.</i>	<i>Description</i>	<i>Page No.</i>
1.	Composition of media for growth and maintenance of <i>T. ferrooxidans</i> used in different studies. ...	18
2.	Chemical analyses of Assam coal. ...	40
3.	Chemical analyses of Polish coal. ...	41
4.	Chemical analyses of Rajasthan lignite. ...	42
5.	Proximate analyses of Assam coal used for beneficiation studies. ...	50
6.	Sulphur analyses of Assam coal used for beneficiation studies. ...	50
7.	Specific growth rate constants ( $\mu$ ) and apparent maximum growth rate ( $\mu_{max}$ ) of three isolates, Tf-R, Tf-A and Tf-P under different conditions at 35°C and initial pH of 2.5. ...	56
8.	Total iron concentration, pH and redox potential values during growth studies of Tf-A, Tf-P, and Tf-R in absence of coal in the media. ...	60
9.	Average Fe(II) oxidation rates and reaction rate constants of three isolates, Tf-A, Tf-P and Tf-R under different conditions at 35°C and an initial pH of 2.5. ...	62
10.	Total iron concentration, pH and redox potential values during growth studies of Tf-A, Tf-P and Tf-R in presence of coal in the media. ...	65
11.	Total iron concentration, pH and redox potential values during growth studies of Tf-A, Tf-P and Tf-R isolates in presence of increased cell concentration in the media. ...	71

List of Tables (Contd.)

<i>Fig. No.</i>	<i>Description</i>	<i>Page No.</i>
12.	Total iron concentration, pH and redox potential values ... during growth of Tf-R in bioreactor.	73
13.	Influence of initial pH on microbial desulphurisation of ... different coals.	76
14.	Complete analysis of coal samples at conditions which ... yielded the best results	78-79
	(a) Sulphur analyses of coal samples before and after microbial treatment.	
	(b) Proximate analysis of coal samples before and after treatment.	
	(c) Metal analysis of coal samples before and after treatment.	
15.	Influence of ferrous sulphate on microbial ... desulphurisation of different coals.	86
16.	Results of microbial desulphurisation of Rajasthan lignite ... in shake flask: influence of time period.	89
17.	Comparison of kinetics and literature data on <i>Thiobacillus ferrooxidans</i> assuming first order kinetics of sulphur removal from coal.	92
18.	Results from microbial desulphurisation of Rajasthan ... lignite using Tf-R in bioreactor.	93
19.	Analysis of flotation products from beneficiation studies ...	96
20.	Removal of total sulphur from Assam coal (45 microns ... size) using different microorganisms.	96
21.	Analysis of raw coal, coal after conditioning (feed), ... tailings and concentration for sulphur(in %).	97

## SECTION-II

### MANGANESE

<i>Fig. No.</i>	<i>Description</i>	<i>Page No.</i>
1.	Chemical analyses of manganese ore from Joda. ...	150
2.	Screening of isolated strains of microorganisms with maximum ability for bioleaching of manganese ore. ...	152
3.	Influence of particle size on bioleaching of manganese ore. ...	168
4.	Influence of pulp density on bioleaching of manganese ore. ...	170
5.	Influence of sucrose concentration on bioleaching of manganese ore. ...	172
6.	Acid leaching of manganese ore. ... (a) Oxalic acid leaching (b) Citric acid leaching (c) Sulphuric acid leaching	178
7.	Rate constants for <i>in-situ</i> leaching, culture filtrate leaching and organic acid leaching. ...	183
8.	Bioleaching of four manganese ores using <i>Penicillium citrinum</i> . ...	184
