

## LIST OF TABLES

<b>Table No.</b>	<b>Title</b>	<b>Page No</b>
Table 2.1	SPS Survey Studies	24
Table 4.1	Bus Configuration	58
Table 4.2	Base Case (Power Flows in the event DC line and critical lines under consideration)	73
Table 4.3	Application of Contingency Event (Power Flows, with DC line outage and in the critical lines under consideration)	74
Table 4.4	Application of Contingency Event and actuation of SPS with two units generation rejection (Power Flows, with DC line outage and in the critical lines under consideration)	75
Table 4.5	Application of Contingency Event and with one unit out of service at RTPP Power Plant (Power Flows, with DC line outage and in the critical lines under consideration)	76
Table 4.6	(Case I) Base case simulation study with the existing system in normal operating state	79
Table 4.7	(Case II) Simulation study with the contingency event application Contingency simulation study	81
Table 4.8	(Case III) Simulation study with the SPS action in event of disturbance	83
Table 4.9	(Case IV) Simulation study with one unit outage at the power plant in the event disturbance	85
Table 5.1	Elements of Cut set	95
Table 5.2	Cohesive loads grouping to meet the Metros and other essential loads	98
Table 5.3	The availability of shunt reactors	102
Table 5.4	(Stage-I) Modeled Integrated System Power Flow Results	106
Table 5.5	(Stage-II (i)) Modeled Island System Power Flow Results	112

Table 5.6	(Stage-II (ii)) Voltages incident at various bus locations when the proposed island is formed	116
Table 5.7	(Stage-II (ii)) Voltages incident at various bus locations with the reactive compensation in the newly formed island	117
Table 6.1	Comparative study of the Power Flows on the Critical lines with and without the application of SPS	120
Table 6.2	Comparative study of the voltages incident at low voltages buses after the formation of island with and without compenstion	122
