Fig. 1. Influence of carbon substrates (0.5% w/w) on N₂ fixation in paddy soils. 67

Fig. 2. Effect of different levels of cellulose on N₂ fixation in an alluvial (no. 1) soil. 70

Fig. 3. Influence of varying levels of cellulose on N₂ fixation in a laterite (no. 3) soil. 72

Fig. 4. N₂ fixation as influenced by the levels of cellulose application in an acid saline Karapadam (no. 10) soil. 74

Fig. 5. N₂-ase activity as influenced by increasing levels of applied NH₄-N in an alluvial (no. 1) soil. 86

Fig. 6. Effect of increasing levels of NH₄-N on the N₂-ase activity of an acid saline Karapadam (no. 10) soil. 89

Fig. 7. Rhizosphere N₂ fixation as influenced by organic matter and combined N in a submerged alluvial (no. 1) soil. 103

Fig. 8. Population of Azotobacter (1) and anaerobic N₂ fixers (2) as influenced by organic matter and moisture regime in paddy soils. 114

Fig. 9. Relationship between soil redox potential and in vitro N₂ fixation by Azospirillum spp. isolated from unamended and rice straw amended flooded soils. 136
