ACKNOWLEDGEMENT

It is indeed with a sense of immense relief and ineffable joy that I present this thesis. At the very outset I sincerely express my heart-felt gratitude to Prof. S. N. Behera, my revered research guide whose wide and profound insight into condense matter physics impressed me to dedicate myself to the special study of this particular branch of physics and but for whose kind help, suggestion and cooperation it would not have been possible for me to complete this work. I owe a debt of gratitude to Prof. T. Pradhan, Emeritus Professor of Institute of Physics, Bhubaneswar for helping me in various ways. I also acknowledge my debt of gratitude to Prof. V. S. Rammamty, Director of Institute of Physics for rendering me all facilities for my stay, finalisation of research work and writing out this thesis. I am further deeply indebted to all my teachers particularly to Dr. S. G. Mishra, Dr. A. Khare, Dr. S. C. Phataak and Dr. J. Maharana at the same time to my fellow scholars of the Institute for giving me a wide exposure of physics by frequent learned and deeply penetrating discussions on physics, during my stay as a research scholar at the Institute. I fondly remember the sweet company of my beloved friends and companions in the Institute, viz., Gautam, Devanand, Sarira, Ramesh, Sanjay, Munshi, Pradyot, Giri, Pratik and Kuri for diverting my tedious, strenuous hours and monotonous days during the period of my writing out this thesis by their interesting and inspiring company. I also solemnly acknowledge my debt of gratitude to my learned and venerable colleagues of R. S. College, Amta (Howrah) especially to Prof. M. K. Dawari for rendering me invaluable services in completing my research work and writing out this thesis. Last but not the least, I owe an unrepayable debt of gratitude
to my sincere friends Dr. Pratap Bhattacharya and Dr. Sachindra Nath Karmakar of Saha Institute of Nuclear Physics, Calcutta for rendering me invaluable services in suggesting many ways of improving and finally completing printing etc. of this thesis.

In fine, my heart-felt thanks are due to Dr. Somenath Chakraborti of Kalyani University, Dr. Arun Pal, Dr. Chandidas Mukherjee and Dr. Padmanava Basu of SINP.

Susanta Bhattacharya
