BIBLIOGRAPHY
Admas, P. R. and J. J. Depoye (1976)
Amylase production by *Mucor michei* and *M. pusillus*
Mycologia, 68 : 934-938.

Mycoflora of cracked seeds of certain wheat varieties.
Section of Agric. Sc. Indian Science Congress 68th Session.

Assessment of losses in sorghum seed weight due to
charcoal rot. Indian Phytopathology 36(1) : 85-88.

Aflatoxin contamination of corn in the field. J. Agric. F.
F.Chem. 2:775 – 782

Anjali Khadilkar and K. L. Chaudhari (1977)
A comparative study of extracellular enzymes produced by

Aflatoxins, environmental factors governing occurrence in

Pectic enzymes in tissue degradation Ann. Rev.
Phytopathology 4 : 119 – 146.

Bhatanagar, G.C. (1971)
Discolouration of great millet grains of ear heads due to
*Curvularia lunata* (*Cochliobolus lunata*) on sorghum.
Bhide, N.K., D.J. Mehta and R.A. Lewis (1958a)

Marathwada Univ.

Studies on the deterioration of some pulses by fungi. Indian Phytopathology 29 : 374 - 377.

Role of enzymes of storage fungi in deterioration of stored safflower and sesame seeds. Seed Research 13 (2) : 19-28.

Calderwood, D.L. and N.W. Schroeder (1968),

Castor, L.L. (1977)
Seed moulding of grain sorghum, development of high yielding sorghum cultivars with disease and insect resistance. Annual process report. TAES - USAID contract 1092. Texas Agricultural experimental station Texas U.S.A.

Chahal, A.S. and M.S. Kang (1979)

Changes in the associated mycoflora and viability of seeds in some oil seeds in prolonged storage. Geobios. 8(5) : 200-204.

Chapman, E.S., E. Evans, M.C. Jacobelli and A.A. Logan (1975).

The cellulolytic and amylolytic activity of Papulospora thermophilla. Mycologia 67 : 608 - 615.

Effect of Cajanus cajan seed coat leachates on germination of some seed borne fungi. Indian phytopathology 33 : 112-113.

Chauhan, S.K. and M.I. Nagar (1971)

**Effect of temperature, relative humidity and light on aflatoxin B production in neem and Datura seeds.**  *Int. J. Pharmacognosy* 29(3) : 197-202.

**Grain storage.- The role of fungi in quality loss.**  *Univ. Agric. Extension service. Univ. of Minnesota, P. Minneapolis, 7 : 153 pp.*

**Storage of cereal grains and their products.**  *Cereal Chem.* 51:549.

**Microbial detoxification of aflatoxin.**  *Appl. Micro.* 14 : 934 - 937.

**Changes in the composition of sunflower oil extracted from achenes of Sclerotium battaticola infected plants.**  *J. Agric. Food. Chem.* 37 (1) : 36-38.

Cooney, D.G. and R. Emerson (1964)  

Mycologia. L XIX, 592.

Mold determination in stored farm stock peanut seeds and their relation to concealed damage. Phytopathology 37 : 512-522.

Aflatoxin production by isolates of Aspergillus flavus. Phytopath. 56 : 1390-1393.

Mycoflora associated with strychnos seeds and deterioration of their active principles under storage. Indian Phytopathological society 40(4) 520-524.

Emerson, R. (1968)
Mycologia, 61 : 120.

Fergus, C.L. (1969)

Influence of storage structure on seed mycoflora of pearl millet. Geobios 4 : 126-129.

Seed mycoflora of pearl millet (Pennisetum americanum) Geobios. 5(2) : 121-125.
Goodman, J.J. and C.M. Christensen (1952).

Gupta, D.C. (1976)
Viability of storage seeds in India *Pennisetum typhoides* Seed tech. News 6(1) : 9.

Control of seed borne fungi of maize by coating seeds with antagonestic ones. Seed Res. 7 (2) : 151-156.

Hesseltine, C.W., R.J. Bothost and Shotwell, O.L. (1975)
Aflatoxin occurance in some white corn under Loan. Mycologia, 67 : 392-408.

ISTA - (1966.)
International Seed Testing Association - Rules for seed health testing. 31 : 1-152.

Seed borne fungi of sesame in Sierraleone and their potential aflatoxin/mycotoxin production. Mycopatho. 104(2) : 123-127.

Studies on certain aspects of seed borne fungi. V fungi of some starchy seeds. Indian phytopath. 28(2) : 299-300.

Effect of fungal metabolites on seed mycoflora and seed germination of Mustard. Biovigyanum 7(1) : 73-76.

Total free amino acid content of mustard seed due to storage fungus *Aspergillus flavus* Indian Phytopathological society 43(3) : 329.

Lalithakumari, D., C. V. Govindaswami and P. Vidhyasekaran (1971)
Effect of seed borne fungi on the Physico - chemical properties of groundnut oil. Indian Phytopathology 24 : 283 - 289

Production of mould amylase in submerged culture J. Bact 54 : 149 - 159

Lilleho, J. E; B. D. J. Fenneu and C. M. Herseltine (1976)
*Aspergillus flavus* infection and affatorin production in mixtures of high moisture and dry maize. J. Sto. Pro. Res. 12 : 11-28

Seed borne fungi and protein changes in lobia (*Vigna sinensis*) seeds. Geobios 14 : 33-35

Mangallam, S. A. Subrahmanyam and K. S. Gopalkrishnan (1977)
Preliminary observations on the production of amyloglucosidase by thermophilic fungi. Curr. Sci. 46(1) ; 16.
Mathur S. K. and S. Sinha (1977)
Seed leachates and inhibition of certain seed-borne pathogenic fungi of bajra (\textit{Pennisetum typhoides}) Proc. Indian Botanical Science Acad B 48 (5) : 190-197

Mathur S. K. and S. Sinha (1978)
Effect of fungal metabolites on seed viability and seedling vigour of bajra (\textit{Pennisetum typhoides}) Seed Research 6 (2) : 181-187

The mycoflora of peanuts in Egypt Mycopath 68 (1) : 39-46

Murthy S. P. and M. Sirsi (1957)

Nagar, H. L. and S. K. Chauhan (1977)
Storage rotting fungi and chemical composition of groundnut kernels. Ind. J. Micr. 17 (3) : 116-117

Nagrajan K. and T. V. Karivartharaja (1976)
Storage studies in sorghum, bajra and maize seed viability in relation to moisture control Seed Research 4(2) : 161-166

Neergard P. (1973)
Detection of seed borne pathogen by culture test. Seed Sci. & Tech. 1 : 217-254
Oso B. A. (1979)

Mycelial growth and amylase production by *Talaromyces emersonii* Mycologia 71 (3): 520 - 529

Studies on seed borne fungi of sorghum. Ph.D. Thesis Marathwada Univ.

Quetiaia P. O. (1982)

Amylolytic activity of *Aspergilly cheralieri* from mouldy maize seeds. Indian Phytopathology, 35 (3) : 428 - 433

Rao, K.N. and R.J. Williams (1977)

Stage of Sorghum in the field susceptible to fungal invasion and mycotoxin formation. Ind. Phytopath. 39 : 106-110.

Extracellular lipase production by fungi from sunflower seed. Mycologia 79 (2) : 205-273.

Studies on association of mycoflora with drug plants and aflatoxin producing potentiality of *Aspergillus flavus*. Indian Phytopathology 41 : 261-262.

Association of *aspergilli* with some medicinal seeds and natural incidence of aflatoxin. Indian Phytopathology 44 : 385-387.

Lipase production by seed borne fungi of linseed. Seed Research 13 (2) : 123-124.

Studies on intracellular protease production by some seed borne fungi of jowar. Physiology of Parasitism Symp. 189-95.
Fungi associated with normal and abnormal seeds of peas and their pathogenic potential. Indian Phytopathology 33 (1) : 162.

Lipase production by storage microorganisms. Indian Phytopathology 29 : 425-426.

Biodeterioration of sesame oil in situ by fungi. Indian Phytopathology 34 : 50-53.

Effect of Macrophomina phaseolina infection on the physico-chemical components of groundnut seed. J. Phytopathology 118 : 181-86.5
